Executive Summary

Introduction & Purpose

Memorial Hermann Memorial City Medical Center (MHMC) is pleased to present its 2019 Community Health Needs Assessment (CHNA). This CHNA report provides an overview of the process and methods used to identify and prioritize significant health needs across Memorial Hermann Health System's regional service area (including MHMC), as federally required by the Affordable Care Act. Memorial Hermann Health System partnered with Conduent Healthy Communities Institute (HCI) to conduct the CHNA for 13 facilities:

- Memorial Hermann Katy Hospital
- Memorial Hermann Memorial City Medical Center
- Memorial Hermann Greater Heights Hospital
- Memorial Hermann Northeast Hospital
- Memorial Hermann Southeast Hospital
- Memorial Hermann Sugar Land Hospital
- Memorial Hermann Southwest Hospital
- Memorial Hermann The Woodlands Medical Center
- Memorial Hermann Rehabilitation Hospital Katy
- Memorial Hermann Texas Medical Center
- TIRR Memorial Hermann
- Memorial Hermann Surgical Hospital Kingwood
- Memorial Hermann Surgical Hospital First Colony

The purpose of this CHNA is to offer a comprehensive understanding of the health needs in MHMC's service area and guide the hospital's planning efforts to address those needs. Special attention has been given to the needs of vulnerable populations, unmet health needs or gaps in services, and input from the community. To standardize efforts across the Memorial Hermann Health System and increase the potential for impacting top health needs in the greater Houston region, community health needs were assessed and prioritized at a regional/system level.

Findings from this report will be used to identify and develop efforts to improve the health and quality of life of residents in the community.

Summary of Findings

The CHNA findings in this report result from the analysis of an extensive set of secondary data (over 100 indicators from national and state data sources) and primary data collected from community leaders, non-health professionals, and organizations serving the community at large, vulnerable populations, and/or populations with unmet health needs.

Through an examination of the primary and secondary data, the following top health needs were identified:

Memorial Hermann Health System's Significant Health Needs

- Access to Health Services
- Cancers
- Children's Health
- Diabetes
- Economy

- Education
- Food Insecurity
- Heart Disease/Stroke
- Lack of Health Insurance
- Low-Income/Underserved
- Mental Health
- Obesity
- Older Adults/Aging
- Substance Abuse
- Transportation

Prioritized Areas

In March 2019, stakeholders from the 13 hospital facilities in the Memorial Hermann Health System completed a survey to prioritize the significant health issues, based on criteria including health impact and risk as well as consideration of Memorial Hermann's strategic focus. The following four topics were identified as priorities to address:

Memorial Hermann Health System's CHNA Priorities

- Access to Healthcare
- Emotional Well-Being
- Food as Health
- Exercise Is Medicine

MHMC will develop strategies to address these priorities in its 2019 Implementation Strategy.

Introduction

Memorial Hermann Memorial City

Located in the heart of West Houston, Memorial Hermann Memorial City (MHMC) Medical Center has been providing proven, trusted healthcare to the residents of Greater and West Houston since 1971. A 444-bed facility, MHMC has more than 1,300 affiliated medical staff physicians, representing 91 medical specialties including heart and vascular care, women's care, children's care, orthopedics and sports medicine, cancer treatment, neuroscience, digestive care, amputation prevention and wound care, pelvic floor health, and urologic care.

Vision

Memorial Hermann will be the preeminent health system in the U.S. by advancing the health of those we serve through trusted partnerships with physicians, employees and others to deliver the best possible health solutions while relentlessly pursuing quality and value.

Mission Statement

Memorial Hermann is a not-for-profit, community-owned, health care system with spiritual values, dedicated to providing high quality health services in order to improve the health of the people in Southeast Texas.

Memorial Hermann Health System

One of the largest not-for-profit health systems in the nation, Memorial Hermann Health System is an integrated system with an exceptional affiliated medical staff and more than 26,000 employees. Governed by a Board of community members, the System services Southeast Texas and the Greater Houston community with more than 300 care delivery sites including 19 hospitals; the country's busiest Level 1 trauma center; an academic medical center affiliated with McGovern Medical School at UTHealth; one of the nation's top rehabilitation and research hospitals; and numerous specialty programs and services.

Memorial Hermann has been a trusted healthcare resource for more than 110 years and as Greater Houston's only full-service, clinically integrated health system, we continue to identify and meet our region's healthcare needs. Among our diverse portfolio is Life Flight, the largest and busiest air ambulance service in the United States; the Memorial Hermann Physician Network, MHMD, one of the largest, most advanced, and clinically integrated physician organizations in the country; and, the Memorial Hermann Accountable Care Organization, operating a care delivery model that generates better outcomes at lower costs to consumers, while providing residents of the Greater Houston area broad access to health insurance through the Memorial Hermann Health Insurance Company. Specialties span burn treatment, cancer, children's health, diabetes and endocrinology, digestive health, ear, nose and throat, heart and vascular, lymphedema, neurosurgery, neurology, stroke, nutrition, ophthalmology, orthopedics, physical and occupational therapy, rehabilitation, robotic surgery, sleep studies, transplant, weight loss, women's health, maternity and wound care. Supporting the System in its impact on overall population health is the Community Benefit Corporation. At a market share of 26.1% in the 'expanded' greater Houston area of 12 counties, our vision is that Memorial Hermann will

be a preeminent integrated health system in the U.S. by advancing the health of those we serve.

Memorial Hermann Memorial City Service Area

The service area for MHMC includes Fort Bend and Harris counties in Texas. The geographic boundaries of the service area are shown in Figure 1. The zip codes within MHMC's primary service area are listed in Table 1 and represent approximately 75% of inpatient discharges (2.9% in Fort Bend County and 72.2% in Harris County).

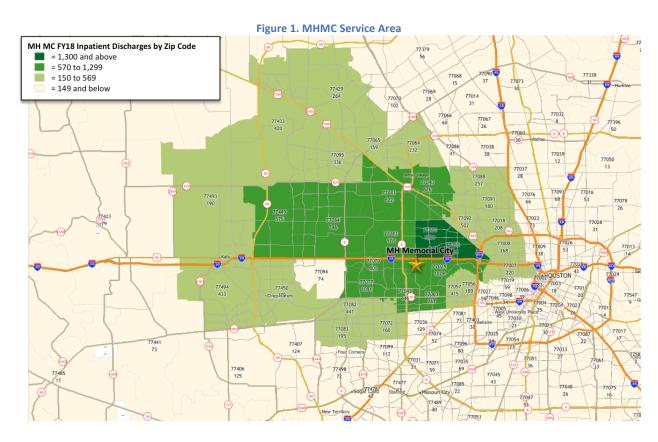

Table 1. Proportion of Patient Population Served by Zip Code

ZIP Code	County	Percent of Patient Population
77080	Harris	8.1%
77055	Harris	5.9%
77024	Harris	4.7%
77077	Harris	4.7%
77043	Harris	4.2%
77079	Harris	3.5%
77084	Harris	3.4%
77063	Harris	3.3%
77042	Harris	2.8%
77040	Harris	2.7%
77041	Harris	2.7%

ZIP Code	County	Percent of Patient Population
77449	Harris	2.5%
77092	Harris	2.2%
77082	Harris	1.9%
77494	Fort Bend	1.9%
77057	Harris	1.8%
77433	Harris	1.8%
77450	Harris	1.6%
77095	Harris	1.5%
77008	Harris	1.2%
77088	Harris	1.1%
77429	Harris	1.1%
77064	Harris	1.0%
77007	Harris	0.9%
77018	Harris	0.9%
77056	Harris	0.8%
77083	Harris	0.8%
77091	Harris	0.8%
77493	Harris	0.8%
77065	Harris	0.7%
77072	Harris	0.7%
77009	Harris	0.6%
77036	Harris	0.6%
77099	Harris	0.5%
77406	Fort Bend	0.5%
77407	Fort Bend	0.5%
77070	Harris	0.4%

Consultants

Memorial Hermann Health System commissioned Conduent Healthy Communities Institute (HCI) to conduct its 2019 Community Health Needs Assessment. HCI works with clients across the nation to drive community health outcomes by assessing needs, developing focused strategies, identifying appropriate intervention programs, establishing monitoring systems, and implementing performance evaluation processes. To learn more about Conduent Healthy Communities Institute, please visit https://www.conduent.com/community-population-health.

Evaluation of Progress Since Prior CHNA

The CHNA process should be viewed as a three-year cycle. An important part of that cycle is revisiting the progress made on priority topics from previous CHNAs. By reviewing the actions taken to address priority areas and evaluating the impact of these actions in the community, an organization can better focus and target its efforts during the next CHNA cycle.

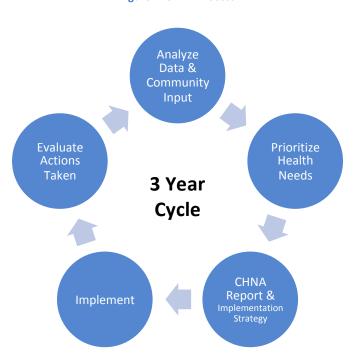

Figure 2. CHNA Process

Priority Health Needs and Impact from Prior CHNA

MHMC's last CHNA was conducted in 2016. The priority areas in FY16-18 were:

- **Healthy Living**: Encourage and foster healthy lifestyles through education, awareness and early detection to prevent illness.
- **Healthcare Access:** Improve community knowledge about healthcare access points and reduce perceived barriers to care.
- Behavioral Health: Ensure that all community members who are experiencing a mental
 health crisis have access to appropriate psychiatric specialists at the time of their crisis,
 are redirected away from the ER, are linked to a permanent, community based mental
 health provider, and have the necessary knowledge to navigate the system, regardless
 of their ability to pay.

Each of the above health topics correlates well with the priorities identified for the current CHNA (detailed below); thus MHMC will be building upon efforts of previous years. A detailed

table describing the strategies/action steps and indicators of success for each of the preceding priority health topics can be found in Appendix A. MHMC's preceding CHNA was made available to the public via the website and community feedback directed to Memorial Hermann's Community Benefit Department: http://www.memorialhermann.org/locations/memorial-city/community-health-needs-assessment-memorial-city. No comments or feedback were received on the preceding CHNA at the time this report was written.

Methodology

Overview

Two types of data were used in this assessment: primary and secondary data. Primary data are data that have been collected for the purposes of this community assessment. Primary data were obtained through a community survey and key informant interviews. Secondary data are health indicator data that have already been collected by public sources such as government health departments. Each type of data was analyzed using a unique methodology. Findings were organized by health topics and then synthesized for a comprehensive overview of the health needs in MHMC's service area.

Secondary Data Sources & Analysis

Secondary data used for this assessment were collected and analyzed from HCI's community indicator database. This database, maintained by researchers and analysts at HCI, includes over 100 community indicators from at least 15 state and national data sources. HCI carefully evaluates sources based on the following three criteria: the source has a validated methodology for data collection and analysis; the source has scheduled, regular publication of findings; and the source has data values for small geographic areas or populations.

Secondary Data Scoring

HCl's Data Scoring Tool® was used to systematically summarize multiple comparisons in order to rank indicators based on highest need. For each indicator, the community value was compared to a distribution of Texas and US counties, state and national values, Healthy People 2020, and significant trends were noted. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varies by indicator and is dependent upon the data source, comparability with data collected for other communities, and changes in methodology over time. The comparison scores were summarized for each indicator, and indicators were then grouped into topic areas for a systematic ranking of community health needs. Please see Appendix B for further details on the quantitative data scoring methodology as well as secondary data scoring results.

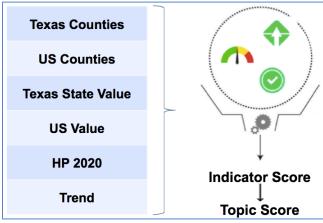

Figure 3. Summary of Topic Scoring Analysis

Disparities Analysis

When a given indicator has data available for subgroups like race/ethnicity, age or gender – and values for these subgroups include confidence intervals – significant differences between the subgroups' value and the overall value can be determined. A significant difference is defined as two values with non-overlapping confidence intervals. Only significant differences in which the value for a subgroup is worse than the overall value are identified. Confidence intervals are not available for all indicators. In these cases, there are not enough data to determine if two values are significantly different from each other.

Primary Data Methods & Analysis

Community input for Memorial Hermann Health System was collected to expand upon the information gathered from the secondary data. Primary data used in this assessment consisted of a community survey in English and Spanish as well as key informant interviews. See Appendix C for the survey and interview questions.

Community Survey

Input from community residents was collected through an online survey. This survey consisted of 11 questions related to top health needs in the community, individuals' perception of their overall health, and weekly exercise habits. The community survey was distributed online through SurveyMonkey® from October 23rd through November 27th of 2018. The survey was made available in both English and Spanish. Paper surveys were also made available and answers to the paper survey were entered into the SurveyMonkey tool. A total of 285 responses were collected. Results in this report are based on the service area for Memorial Hermann Health System. This was a convenience sample, which means results may be vulnerable to selection bias and make the findings less generalizable to the population as a whole.

Table 2. Community Survey Outreach

Community Event	Description
Step Health Event –	Community event hosted by Memorial Hermann providing park activation,
Moody Park, 77009	walking tours, Zumba instruction, and (through a partnership with Houston Food
	Bank) food distribution to low-income, at-risk, and mostly uninsured residents.
Step Health Event –	Community event hosted by Memorial Hermann providing park activation,
Castillo Park, 77009	walking tours, Zumba instruction, and (through a partnership with Houston Food
	Bank) food distribution to low-income, at-risk, and mostly uninsured residents.
Memorial Hermann	10 school-based health clinics in 5 school districts (74 schools) in Harris and Fort
Health Centers for	Bend Counties, providing medical, mental health, and dental care, along with
Schools	nutrition, navigation, and summer boot camp programs to uninsured and
	underinsured children throughout the Greater Houston area.
West Orem YMCA,	A community-centered organization that brings people together to bridge the
77085	gaps in community needs (underserved residents), nurtures residents' potential
	to learn, grow, and thrive, and mobilizes the local community to effect lasting,
	meaningful change.
Spring Branch	A Federally Qualified Health Center (FQHC) providing quality, affordable
Community	healthcare services to the underserved and uninsured communities of Spring

HealthCenter, 77080	Branch and West Houston.
Wesley Community Center, 77009	A multi-purpose social service agency providing residents of Houston: short-term rent, utility, and food assistance to prevent homelessness and maintain family financial stability; a career and personal financial service center; and Early Head Start, a child development program serving infants to toddlers to promote school readiness.
Complete Communities, Houston	Program initiated by the Mayor of Houston in five communities - all historically under-resourced, each with a base level of community involvement and support, and with diverse populations. The program is designed to enhance access to quality affordable homes, jobs, well-maintained parks and greenspace, improved streets and sidewalks, grocery stores and other retail, good schools and transit options. Communities: Acres Homes [77018, 77088, 77091], Gulfton [77056, 77057, 77081], Near Northside [77009, 77022, 77026], Second Ward [77003, 77011, 77020], and Third Ward [77003, 77004, 77204].
Healthy Living Matters	A Houston/Harris County Childhood Obesity Collaborative - A collaborative of multi-sector leaders that promote policy aimed at system-level and environmental change to reduce the incidence of childhood obesity. Priority communities were selected due to the lack of access to healthy food options and opportunities to engage in physical activity as well as for their community assets and readiness for change. Priority Communities: City of Pasadena [77058, 77059, 77502, 77503, 77504, 77505, 77506, 77507, 77536, 77571, 77586], Near Northside [77009, 77022, 77026], and Fifth Ward/Kashmere Gardens [77020, 77026, and 77028]
Greater Northside Health Collaborative	Non-profit collaborative whose goal is to expand active living resources and increase access to quality healthcare and healthy food by promoting resident leadership and civic participation.

The race/ethnicity make-up of survey respondents is shown in Figure 4. The largest proportion of respondents identified as Hispanic/Latino (47.2%), 22.4% as White, 20.8% as Black/African American, and the remaining 9.6% of respondents as Asian/Pacific Islander, Other and Native American.

3.60% 1.20%

Hispanic

White

African American

Asian/Pacific Islander

Other

Native American

Figure 4. Survey Respondents by Race/Ethnicity

Survey respondents were asked to select top issues most affecting the community's quality of life. As shown in Figure 5, the majority of respondents identified Diabetes, Obesity/Overweight, Substance Abuse, and Mental Health & Mental Disorders as top issues in the community.

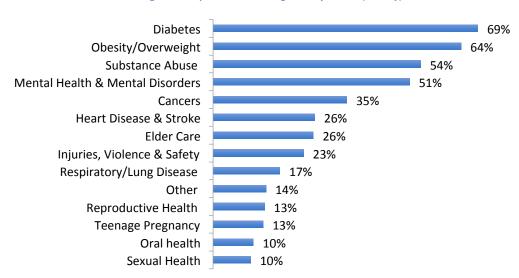

Figure 5. Top Issues Affecting Quality of Life (Survey)

Key Informant Interviews

Community input was also collected through key informant interviews.

Memorial Hermann Health System joined with the Episcopal Health Foundation (EHF) in their key informant interview initiative supporting four Greater Houston area hospital systems in preparing their community health needs assessments. The collaborating hospitals of this initiative include Memorial Hermann, CHI St. Luke's Health, Houston Methodist, and Texas Children's (Table 3). Through this partnership, a total of 53 interviews were conducted with

stakeholders from a range of sectors such as government, healthcare, business, and community service organizations. Community leaders with specific experience working with priority populations, such as women, children, people of color, the disabled, and more, were also interviewed.

Table 3. Memorial Hermann Collaborative Partners

Episcopal Health Foundation's mission is to advance the Kingdom of God with specific focus on human health and well-being through grants, research, and initiatives in support of the work of the Diocese, spanning 57 counties. Through informed action, collaboration, empowerment, stewardship, transparency, and accountability the foundation strives for the transformation of human lives and organizations with compassion for the poor and powerless.

CHI St. Luke's Health, a part of Catholic Health Initiatives (CHI), one of the nation's largest health systems, is dedicated to a mission of enhancing community health through high-quality, cost-effective care. Through partnerships with physicians and community partners, CHI St. Luke's Health serves Greater Houston with its commitment to excellence and compassion in caring for the whole person while creating healthier communities.

Houston Methodist is a nonprofit health care organization serving Greater Houston, dedicated to excellence in research, education, and patient care. Houston Methodist brings compassion and spirituality to all its endeavors to help meet the health needs of the community through the system's I CARE values: integrity, compassion, accountability, respect, and excellence.

Texas Children's Hospital is a not-for-profit organization whose mission is to create a healthier future for children and women throughout Greater Houston and the global community by leading in patient care, education, and research. Texas Children's is committed to creating a healthy community for children by providing the best pediatric care possible, through groundbreaking research and emphasis on education, while also offering a full continuum of family-centered care for women, from obstetrics to well-woman care.

In total, 64 key informant interviews were conducted by phone from August through November 2018; 53 key informant interviews were conducted through the collaborative and 11 interviews were conducted by HCI.

Interviewees who were asked to participate were recognized as having expertise in public health, special knowledge of community health needs and/or represented the broad interest of the community served by the hospital, and/or could speak to the needs of medically underserved or vulnerable populations. Efforts were made to identify interviewees working in and/or knowledgeable about the counties in Memorial Hermann Health System's service area. As seen in Table 4, some interviewees were identified with knowledge of multiple counties.

Table 4. Key Informants by County

County	Key Informants
Austin	Included in Multiple Counties
Brazoria	3
Chambers	2

County	Key Informants
Fort Bend	10
Galveston	7
Harris	28
Liberty	1
Montgomery	4
San Jacinto	Included in Multiple Counties
Walker	Included in Multiple Counties
Waller	2
Wharton	2
Multiple Counties*	5
Total	64

^{*}Five (5) of the Key Informant Interviews represented 2 or more counties, including: Austin, Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, San Jacinto, Walker, Waller, and Wharton counties.

Interviews were transcribed and analyzed using the qualitative analytic tool, Dedoose¹. Interview excerpts were coded by relevant topic areas and key health themes. Three approaches were used to assess the relative importance of the needs discussed in these interviews. These approaches included: the frequency by which a health topic was discussed across all interviews; the frequency by which a topic was described by the key informant as a barrier/challenge; and the frequency by which a topic was mentioned per interviewee.

Data Considerations

Several limitations of data should be considered when reviewing the findings presented in this report. Although the topics by which data are organized cover a wide range of health and health-related areas, data availability varies by health topic. Some topics contain a robust set of secondary data indicators, while others may have a limited number of indicators or limited subpopulations covered by those specific indicators.

Data scores represent the relative community health need according to the secondary data for each topic and should not be considered to be a comprehensive result on their own. In addition, these scores reflect the secondary data results for the population as a whole, and do not represent the health or socioeconomic need that is much greater for some subpopulations. Moreover, many of the secondary data indicators included in the findings are collected by survey, and though specific methods are used to best represent the population at large, these measures are subject to instability, especially for smaller populations. The Index of Disparity is also limited by data availability, where indicator data varies based on the population groups and service areas being analyzed.

¹ Dedoose Version 8.0.35, web application for managing, analyzing, and presenting qualitative and mixed method research data (2018). Los Angeles, CA: SocioCultural Research Consultants, LLC www.dedoose.com

Race/Ethnic Groupings

The secondary data presented in this report derive from multiple sources, which may present race and ethnicity data using dissimilar nomenclature. For consistency with data sources throughout the report, subpopulation data may use different terms to describe the same or similar groups of community members.

Zip Codes and Zip Code Tabulation Areas

This report presents both ZIP Code and ZIP Code Tabulation Area (ZCTA) data. ZIP or Zone Improvement Plan Codes were created by the U.S. Postal Service to improve mail delivery service. They are based on postal routes, which factor in delivery-area, mail volume and geographic location. They are not designed to be used for statistical reporting and may change frequently. Some ZIP Codes may only include P.O. boxes or cover large unpopulated areas. ZCTAs or ZIP Code Tabulation Areas were created by the U.S. Census Bureau and are generalized representations of ZIP Codes that have been assigned to census blocks. Therefore, ZCTAs are representative of geographic locations of populated areas. In most cases, the ZCTA will be the same as its ZIP Code. ZCTAs will not necessarily exist for ZIP Code areas with only businesses, single or multiple addresses, or for large unpopulated areas. Since ZCTAs are based on the most recent Census data, they are more stable than ZIP Codes and do not change as frequently.

Demographics for this report are sourced from the United States Census Bureau, which presents ZCTA estimates. Tables and figures in the Demographics section of this report reference ZIP Codes in title (for purposes of familiarity) but show values of ZCTAs. Data from other sources is representative by ZIP Codes and are labeled as such.

Prioritization

In order to focus efforts on a smaller number of the most significant community issues, sixteen representatives from the Memorial Hermann Health System (one or more representing each facility) participated in an online prioritization process to prioritize the fifteen significant health needs identified through the secondary and primary data analyses. The prioritized health needs will be under consideration for the development of an implementation plan that will address some of the community's most pressing health issues.

Prioritization Process

To prioritize significant health needs, Memorial Hermann stakeholders participated in an online webinar on March 7, 2019 to review data synthesis results followed by completion of a prioritization matrix listing significant health needs and four criteria by which to rate each need. Participants scored each need for each of the criteria on a scale from 1-5, with 1 meaning the respondent strongly disagrees to 5 meaning the respondent strongly agrees that the health need meets the criterion. Respondents were also able to select "Don't Know/Unsure" for each health need.

The criteria for prioritization included to what extent an issue:

- Impacts many people in the community
- Significantly impacts subgroups in the community (gender, race/ethnicity, LGBTQ, etc.)

- Has inadequate existing resources in the community
- Has high risk for disease or death

Completion of the prioritization matrix in Appendix D resulted in numerical scores for each health need that corresponded to how well each health need met the criteria for prioritization. The scores were ranked from highest to lowest (Table 5).

Table 5. Results from Memorial Hermann Prioritization Matrix

Significant Health Need	Impact on Community	Impact on Subgroups	Inadequate Resources	High Risk	Average Score
Obesity (Exercise,	4.69	4.00	3.19	4.50	4.09
Nutrition and Weight)					
Mental Health	4.44	3.44	4.50	3.75	4.03
Diabetes	4.50	4.00	3.25	4.19	3.98
Lack of Health Insurance	4.31	4.19	3.38	4.00	3.97
Low-	4.19	4.19	3.44	4.00	3.95
Income/Underserved					
Heart Disease/ Stroke	4.44	3.82	2.81	4.44	3.88
Substance Abuse	3.56	3.88	3.63	4.19	3.81
Access to Health	4.00	3.94	3.25	3.88	3.77
Services					
Older Adults and Aging	4.38	3.81	3.13	3.75	3.76
Food Insecurity	3.88	4.00	3.44	3.50	3.70
Cancers	4.19	3.19	3.00	4.31	3.67
Education	3.88	3.81	3.00	3.13	3.45
Transportation	4.00	3.88	2.81	3.00	3.42
Children's Health	4.00	3.50	3.00	3.19	3.42
Economy	3.31	3.31	2.69	2.88	3.05

In addition to rating each need in the matrix, prioritization participants were asked to rate the level of importance of Memorial Hermann's 4 strategic pillars.

- 1. Improving **Access to Healthcare** through programming, education, and social service support;
- 2. Addressing **Emotional Well-being** (mental and behavioral health) through innovative access points;
- 3. Promoting the importance of a healthy diet through screening and creating access to nutritious **Food as Health**; and,
- 4. Fostering improved health through **Exercise Is Medicine** with culturally appropriate activities.

Each of these intersecting pillars connect to each other through various points in Memorial Hermann programs and initiatives advancing the health of our communities (Figure 6).

Figure 6. Memorial Hermann's Four Pillars for Community Health

Over 93% of participants responded that the 4 pillars were important or very important. The Memorial Hermann Community Benefit team reviewed these findings, and taking into account the alignment of top needs with Memorial Hermann's strategic focus areas, a decision was made to integrate:

- Lack of Health Insurance, Low-Income/Underserved, and Access to Health Services into Pillar 1: Access to Healthcare
- Mental Health and Substance Abuse into Pillar 2: Emotional Well-Being
- Diabetes, Food Insecurity and Heart Disease/Stroke into Pillar 3: Food as Health
- Obesity (Exercise, Nutrition and Weight) into Pillar 4: Exercise Is Medicine

Through this system-wide prioritization process, the following four priorities for Memorial Hermann Health System are:

- Access to Healthcare (addressing Access to Health Services, Lack of Health Insurance, and Low-Income/Underserved)
- Emotional Wellbeing (addressing Mental Health and Substance Abuse)
- Food as Health (addressing Diabetes, Food Insecurity, and Heart Disease/Stroke)
- Exercise Is Medicine (addressing Obesity)

These four health topics will be explored further in order to understand how findings from the secondary and primary data analyses resulted in each issue being a high priority health need for Memorial Hermann Health System.

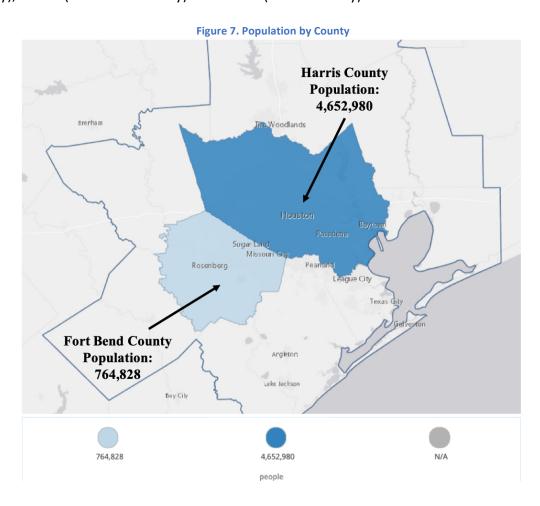

Demographics

The following section explores the demographic profile of MHMC's service area, including Fort Bend and Harris counties. The demographics of a community significantly impact its health profile. Different race/ethnic, age, and socioeconomic groups have unique needs and require different approaches to health improvement efforts. All demographic estimates are sourced from the U.S. Census Bureau's 2013-2017 American Community Survey unless otherwise indicated. Furthermore, tables in this section list indicator values for the top 75% of zip codes within MHMC's service area in descending order of inpatient discharges unless otherwise noted.

Population

According to the U.S. Census Bureau's 2013-2017 American Community Survey, the two counties in MHMC's service area had populations of 764,828 (Fort Bend County) and 4,652,980 (Harris County). Figure 7 illustrates the population size by county and Table 6 by zip code. As shown in Table 6, the most populous zip codes in MHMC's service area are 77449 (Harris County), 77494 (Fort Bend County) and 77084 (Harris County).

MEMORIAI' HERMANN

Age

Figure 8 shows MHMC's service area population that is under 18 years old. Almost 28% of Fort Bend County's population is under 18 and nearly 27% of Harris County's population is under 18.

Fort Bend and Harris counties have higher proportions of residents under 18 compared to the state and national values.

As shown in Figure 9, Fort Bend and Harris counties have smaller proportions of older adults compared to Texas and the U.S. In Fort Bend County, 10.6% of the population is over 65 years old. In Harris County, 10.2% of residents are over 65.

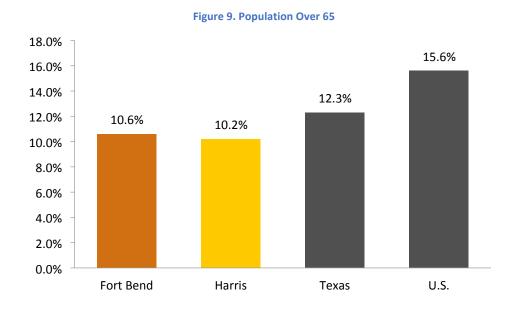

Figure 10 shows that both Fort Bend and Harris counties have larger proportions of residents under 5 years old compared to the U.S. A little over 7% of Fort Bend County's population is under 5 while Harris County has 7.7% of its population under 5.

Figure 10. Population Under 5

Race/Ethnicity

The race and ethnicity composition of a population is important in planning for future community needs, particularly for schools, businesses, community centers, health care and child care. Race and ethnicity data are also useful for identifying and understanding disparities in housing, employment, income, and poverty.

A larger number of residents in Fort Bend County identify as White, non-Hispanic (34.4%) while Harris County has a larger number of residents who identify as Hispanic or Latino (42.2%). Figure 11 shows the racial composition of residents in Fort Bend County with 34.4% of residents identifying as White, non-Hispanic; 24.2% as Hispanic or Latino (of any race); 20.2% as Black or African American; 19.2% as Asian; and 2% as American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, "Some other race", or "Two or more races".

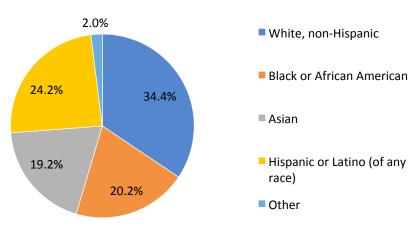

Figure 11. Race/Ethnicity in Fort Bend County

Figure 12 shows the racial composition of residents in Harris County with 42.2% of residents identifying as Hispanic or Latino (of any race); 30.6% as White; 18.5% as Black or African

American; 6.8% as Asian; and 1.9% as American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, "Some other race", or "Two or more races".

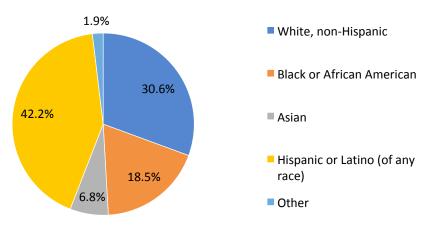

Figure 12. Race/Ethnicity in Harris County

Language

Language is an important factor to consider for outreach efforts in order to ensure that community members are aware of available programs and services.

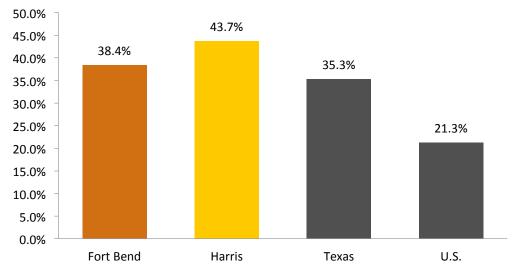

Figure 13. Language Other than English Spoken at Home

Figure 13 shows the proportion of residents in Fort Bend and Harris counties who speak a language other than English at home. Approximately 38% of residents in Fort Bend County and almost 44% of residents in Harris County speak a language other than English as compared to 35.3% in Texas and 21.3% in the U.S. This is an important consideration for the effectiveness of services and outreach efforts, which may be more effective if conducted in languages other than English alone.

		American Community Survey 2013-2017

American Community Survey, 2013-2017

As shown in Table 7, Harris County has a larger proportion of residents with difficulty speaking English (20.4%) compared to Fort Bend County (13.0%) and the state of Texas (14.1%). In Harris County, almost half of residents (47.3%) in zip code 77036 and 41.9% of residents in zip code 77072 have difficulty speaking English. Within MHMC's top zip codes for inpatient discharges (77080 and 77055), over 30% of community members have difficulty speaking English.

Social and Economic Determinants of Health

This section explores the economic, environmental, and social determinants of health in MHMC's service area. Social determinants are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life.

Income

Median household income reflects the relative affluence and prosperity of an area. Areas with higher median household incomes are likely to have a greater share of educated residents and lower unemployment rates.

Figure 14 compares the median household income values for both counties in MHMC's service area to the median household income value for Texas and the United States. Fort Bend County's median household income of \$93,645 is greater than Harris County's median household income (\$57,791). Harris County's median household income is similar to the state and national values.

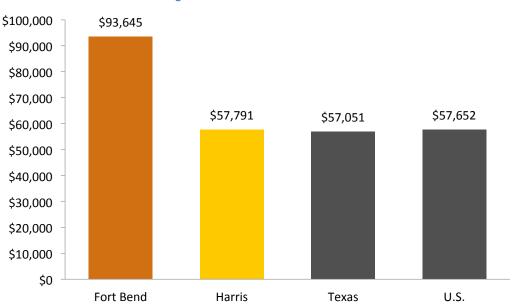

Figure 14. Median Household Income

As shown in Table 8, MHMC's top zip codes for inpatient discharges reveal a broad range in median household income. At \$44,386 and \$52,269 respectively, zip codes 77080 and 77055 have median household incomes lower than the state of Texas, whereas zip code 77024 has a median household income of \$118,561, which is more than double the state value.

American Community Survey, 2013-2017

Poverty

Federal poverty thresholds are set every year by the Census Bureau and vary by size of family and ages of family members. A high poverty rate is both a cause and a consequence of poor economic conditions.

Figure 15 shows the proportion of residents living below the poverty level in Fort Bend and Harris counties compared to the state of Texas and the U.S. The percentage of residents living below the poverty level in Harris County is 16.8%, which is higher than the national value (14.6%) and slightly higher than the state value (16.0%). In Fort Bend County, 8.1% of residents live below the poverty value, which is lower than the national value and nearly half the value of Harris County and Texas.

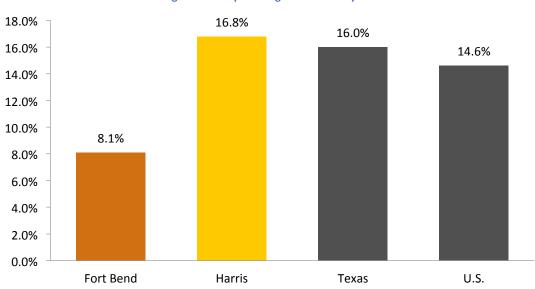

Figure 15. People Living Below Poverty Level

Figure 16 shows the proportion of residents living below the poverty level by race/ethnicity. In Fort Bend County, 14.8% of residents identifying as Hispanic or Latino live below the poverty level, compared to 3.8% White, 5.9% Asian and 9.4% Black or African American residents. For all race/ethnicity groups in Fort Bend County, the percentage of residents living below the poverty level is nevertheless lower than the values for Harris County, Texas and the U.S. In Harris County, 22.6% of Hispanic or Latino residents and 21.8% of Black or African American residents live below the poverty level, compared to 7% White and 11.4% Asian residents. The percentage of Black and Asian residents living below the poverty level in Harris County is higher than the state values for Black and Asian residents.

Figure 16. People Living Below Poverty Level by Race/Ethnicity

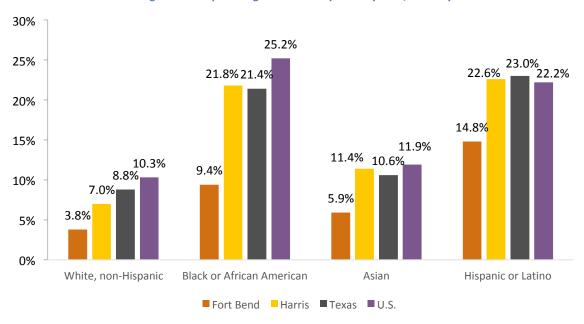

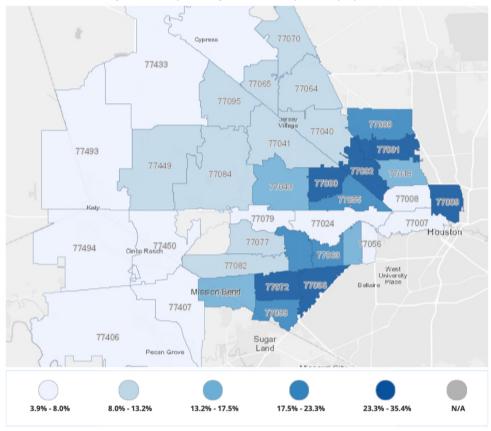

Figure 17. People Living Below Poverty Level by Zip Code

Poverty rates are over twice as high in Harris County (16.8%) compared to Fort Bend County (8.1%) (Table 9.) As show in Figure 17 and Table 9, within MHMC's service area, over 25% of residents in zip code 77080 and over 22% of residents in zip code 77055 are living below the

poverty level, which is higher than the value for Harris County (16.8%) and Texas (16%), and more than 2.5 times the value for Fort Bend County (8.1%).

Food Insecurity

The Supplemental Nutrition Assistance Program (SNAP) is a federal assistance program that provides low-income families with electronic benefit transfers (EBTs) that can be used to purchase food. The goal of the program is to increase food security and reduce hunger by increasing access to nutritious food.

Table 10 shows the percent of households with children that participate in SNAP in the zip codes within MHMC's service area. Both Fort Bend and Harris counties have higher proportions of households with children receiving SNAP compared to the state of Texas. Although the average value for Fort Bend County (73.5%) is higher overall compared to Harris County (67.7%), within MHMC's top ten zip codes for inpatient discharges, zip codes 77080, 77055, 77024, 77043, 77079, 77084, and 77063 (all within Harris County) have proportions higher than 70%. In particular, zip codes 77080 and 77084 have more than 80% of households with children receiving SNAP.

Unemployment

The unemployment rate is a key indicator of the local economy. Unemployment occurs when local businesses are not able to supply enough appropriate jobs for local employees and/or when the labor force is not able to supply appropriate skills to employers. A high rate of unemployment has personal and societal effects. During periods of unemployment, individuals are likely to feel severe economic strain and mental stress. Unemployment is also related to access to health care, as many individuals receive health insurance through their employer. A high unemployment rate places strain on financial support systems, as unemployed persons qualify for unemployment benefits and food stamp programs.

Figure 18 displays the rate of unemployment in Fort Bend and Harris counties between May 2017 and November 2018. In both counties, the unemployment rate has exhibited a decrease. In November 2018, the Fort Bend County rate was equivalent to the state and national rate. However, the unemployment rate in Harris County (3.8%) remains higher than Texas and the U.S.

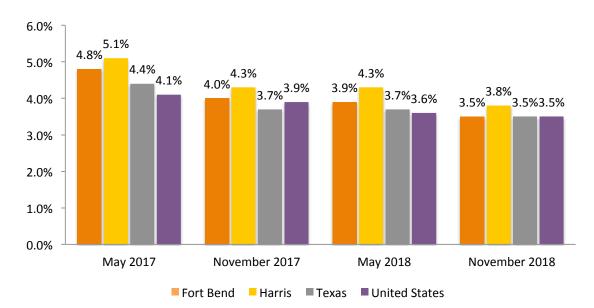

Figure 18. Unemployment Rate per County (U.S. Bureau of Labor Statistics, 2017-2018)

Education

Graduating from high school is an important personal achievement and is essential for an individual's social and economic advancement. Graduation rates can also be an important indicator of the performance of an educational system. Having a bachelor's degree opens up career opportunities in a variety of fields and is often a prerequisite for higher-paying jobs.

Figure 19 displays the proportion of residents in Fort Bend and Harris counties who are 25 years and older with at least a high school degree. Nearly 90% of residents 25 years and older in Fort Bend County have at least a high school degree compared to 80.5% in Harris County. Harris County's value is lower than the U.S. (87.3%) and Texas (82.8%) while Fort Bend County's value is higher than both the U.S. and Texas.

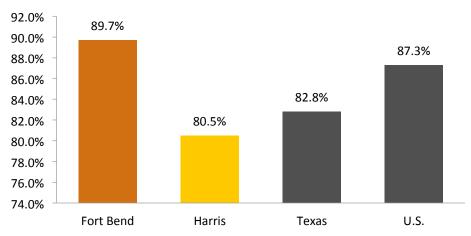

Figure 19. People 25+ with a High School Degree or Higher

Figure 20 shows the proportion of residents in Fort Bend and Harris counties who are 25 years and older with a bachelor's degree or higher. With nearly 46% of residents 25 and older having a bachelor's degree in Fort Bend, this county has an economic advantage compared to Harris County, Texas, and the United States. The proportion of residents 25 and older with a bachelor's degree in Harris County (30.5%) is somewhat better than the rate in Texas (28.7%), and similar to the rate for the entire United States (30.9%).

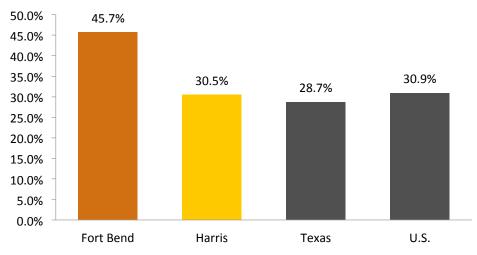

Figure 20. People 25+ with a Bachelor's Degree or Higher

Table 11 displays the educational attainment indicators for residents 25 years and older by zip code in MHMC's service area. For high school degree attainment, the zip code with the highest rate is 77056 (98.0%) and the zip code with the lowest rate is 77036 (62.7%). For attainment of a bachelor's degree, the zip code with the highest rate is 77024 (75.8%) and the zip code with the lowest rate is 77072 (13.3%). The zip codes with highest proportions of MHMC inpatient discharges, zip codes 77080 and 77055, have less than 75% of people 25 years and older with a high school degree. In zip code 77080, approximately 17% of residents 25 years and older have a bachelor's degree or higher.

Transportation

There are numerous ways in which transportation may influence community health. Public transportation offers mobility, particularly to people without cars. Transit can help bridge the spatial divide between people and jobs, services, and training opportunities. Public transportation also reduces fuel consumption, minimizes air pollution, and relieves traffic congestion. Walking to work helps protect the environment, while also providing the benefit of daily exercise.

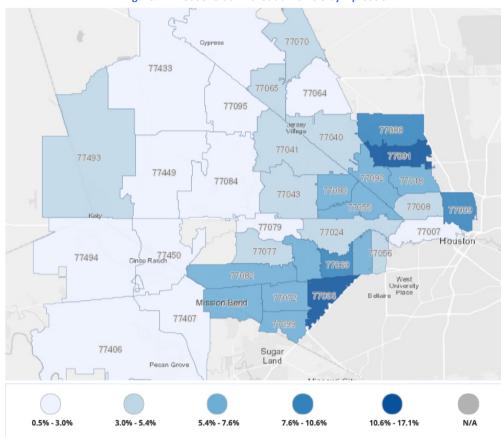

Figure 21. Households Without a Vehicle by Zip Code

Figure 21 shows the percentage of households without a vehicle within MHMC's service area. As shown, more than 10% of households in zip codes 77091 and 77036 do not have a vehicle.

American Community Survey, 2013-2017

Table 12 displays the different modes of commuting used by residents of Fort Bend and Harris counties. In Fort Bend County, less than 1% of the population commutes by walking or biking. In Harris County, slightly more residents commute by walking (1.5%) and biking (0.3%). In both counties, the majority of residents commute by driving alone; with 82% in Fort Bend County and 79.3% in Harris County, which is similar to the state value (80.5%).

Public transportation is used by Harris County residents (2.7%) more so than Fort Bend residents (1.6%), perhaps indicative of differences in public transportation infrastructure. In Harris County, 7.5% of residents living in zip code 77063 commute by public transportation. Considering the top ten zip codes for inpatient discharges within MHMC's service area, zip codes 77055, 77079 and 77063 have the highest proportions of residents commuting by public transportation.

SocioNeeds Index®

Conduent Healthy Communities Institute developed the SocioNeeds Index® to easily compare multiple socioeconomic factors across geographies. This index incorporates estimates for six different social and economic determinants of health – income, poverty, unemployment, occupation, educational attainment, and linguistic barriers – that are associated with poor health outcomes including preventable hospitalizations and premature death.

Zip codes within each county are assigned an index value from 0 (low need) to 100 (high need), based on how those zip codes compare to others in the U.S. Within each county, the zip codes are then ranked from 1 (low need) to 5 (high need) to identify the relative level of need. Zip codes with populations under 300 persons are excluded.

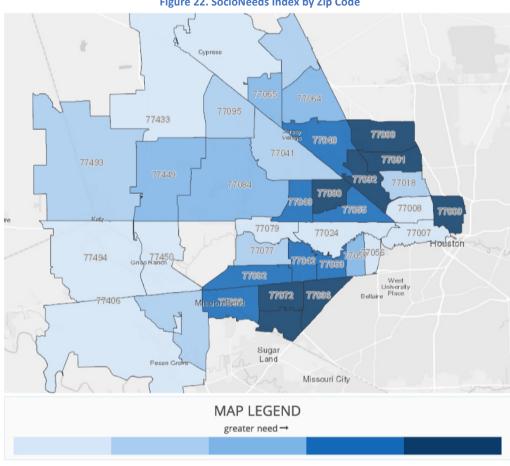

Figure 22. SocioNeeds Index by Zip Code

As show in Figure 22 and Table 13, the ten zip codes within MHMC's service area that have the highest SocioNeeds Index values are within Harris County; zip codes 77036, 77072, 77080, 77088, 77091, and 77099 have values greater than 95. The zip codes with largest proportion of inpatient discharges at MHMC, zip codes 77080 and 77055, have SocioNeeds Index values of 95.6 and 82.6, respectively.

Table 13. SocioNeeds Index by Zip Code (In Order of SocioNeeds Index Value)

Conduent Healthy Communities Institute SocioNeeds Index, 2019

Data Synthesis

All forms of data have their own strengths and limitations. To gain a comprehensive understanding of the significant health needs for Memorial Hermann Health System, the findings from both the primary data and the secondary data were compared and studied together. The secondary data, key informant interviews and community survey were treated as three separate sources of data.

The secondary data were analyzed using data scoring, which identified health areas of need based on the values of indicators for each topic area (Appendix B). Table 14 and Table 15 display the data scores for Health and Quality of Life Topics for Fort Bend and Harris counties.

Table 14. Fort Bend County Topic Scores

Topic	Score

The analysis of key informant interviews occurred using the qualitative software: Dedoose¹. For the community survey, HCI performed a simple review and analysis to identify top health needs. Overall, each method produced individual results that represent the community input in this report. This consolidated input leads to the prioritized heath needs in this report. This triangulated approach is shown in Figure 23.

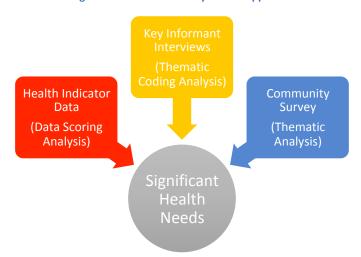

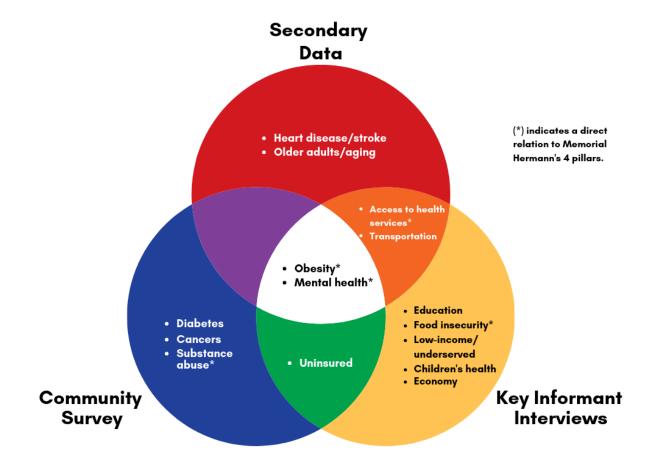

Figure 23. Visual of Data Synthesis Approach

The team used the triangulated approach to identify significant health needs for Memorial Hermann Health System. Figure 24 displays the results of this synthesis. For many of the health topics evidence of need was present across multiple data sources, including Obesity, Mental Health, Access to Health Services, Transportation, and Uninsured. For other health topics the evidence was present in just one source of data, however it should be noted that this may be reflective of the strength and limitations of each type of data that was considered in this process.

Figure 24. Data Synthesis Results

Prioritized Significant Health Needs

Prioritization Results

Upon completion of the online prioritization survey, four health areas were identified for subsequent implementation planning by Memorial Hermann Health System. These four health priorities are: Access to Care, Emotional Well-Being, Food as Health, and Exercise Is Medicine.

The following section will dive deeper into each of these health topics in order to understand how findings from the secondary and primary data led to each health topic becoming a priority health issue for Memorial Hermann Health System. For each prioritized health need, key issues are summarized; secondary data scores are noted for indicators of concern; and community input is described.

Secondary Data Scoring Methodology

For each indicator, each county in MHMC's service area was assigned a score based on its comparison to other communities, whether health targets have been met, and the trend of the indicator value over time. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varied by indicator and was dependent upon the data source, comparability with data collected for other communities, and changes in methodology over time. Please see Appendix B for further information on HCI Data Scoring methodology.

Access to Healthcare

Key Issues:

- Range of barriers, including transportation, access to specialty care, lack of awareness, and fear or stigma
- Lack of health insurance
- Low income and vulnerable groups

Secondary Data

Access to Health Services, Lack of Insurance and Low-Income/Underserved were identified as significant needs for Memorial Hermann Health System. As shown in Table 17, there are several indicators related to Access to Health Services with data scores equal to or greater than 1.75; Harris County having a greater number of indicators of concern overall compared to Fort Bend County.

In Fort Bend County, Mental Health Provider Rate is an indicator of concern with 59.8 providers per 100,000 population, compared to the Texas value of 98.8 and U.S. value of 214.3. In Harris County, indicators of concern include: Adults Unable to Afford to See a Doctor, Adults with Health Insurance, Children with Health Insurance, and Persons with Health Insurance. Over 22% of Harris County adults are unable to afford to see a doctor, which is higher than the proportion in Texas (18.3%) and the U.S. (12.1%). Moreover, approximately 20% of residents in Harris County do not have health insurance.

[4] County Health Rankings								

When considering Access to Health Services, it is important to take into account the economy and how financial barriers impact community residents' ability to access care. As shown in Table 18, there are several economic indicators with data scores greater than 2 in Fort Bend and Harris counties.

In Fort Bend County, indicators of concern include: Median Household Gross Rent, Median Monthly Owner Costs for Households without a Mortgage, and Mortgaged Owners Median Monthly Household Costs. The Median Household Gross Rent in Fort Bend County is \$1,252 compared to \$911 in Texas and \$949 in the U.S. Moreover, this indicator is exhibiting a negative trend over time. Similarly, the Median Monthly Owner Costs for Households without a Mortgage is higher in Fort Bend County (\$712) than Texas (\$467) and the U.S. (\$462).

Compared to Fort Bend, Harris County has a broader range of economic indicators of concern, including: Homeownership, Severe Housing Problems, Students Eligible for the Free Lunch Program, Median Monthly Owner Costs for Households without a Mortgage, SNAP Certified Stores, Median Household Gross Rent, Families Living Below Poverty Level, and Food Insecurity Rate. Less than 50% of Harris County residents own a home. Over 20% of residents in Harris County have severe housing problems. And more than 58% of students are eligible for the free lunch program compared to the national value of 42.6%. In Harris County, there are over 14% of families living below the poverty level compared to 13% in Texas and 11% in the U.S.

Primary Data

During the key informant interview process, Access to Health Services was discussed over 160 times and was raised by participants almost 50 times in relation to barriers or challenges to achieving health in the community. The primary themes related to barriers or challenges were limitations to procuring specialty care services, transportation to services and hours of operation. In addition to the primary themes, two additional barriers or challenges stood out as key factors impacting access to health care services, lack of knowledge and stigma or fear preventing people from seeking care.

The issue that interview participants were most concerned with was patients being able to access follow up care with specialty care providers. Multiple participants raised concerns that even if patients are able to access preventative or primary care services, they may not be able to access the appropriate follow up care with a specialty care provider. Some participants raised this concern in context of patients not living near a specialist and others raised in context of patients not being able to afford the cost of follow up care. A concern brought up by a few participants, that for serious chronic conditions, patients would ultimately end up seeking care from emergency services instead.

Another common concern raised by interview participants was transportation to services and hours of operation of services limiting patients' access to care. Participants described how these factors determine whether patients decide to take off from work and seek services in the first place. A few participants described the many services and resources that are available to the community but that many may not be aware how they can access or benefit from them. One participant described resources being concentrated in certain geographic areas and more

remote locations not being well connected or knowledgeable about how they may also benefit from these resources. Participants described the potential for more collaboration and partnership to connect communities to one another. Several participants described a downturn in people seeking preventative care service and hypothesized that one of the factors may be related to the immigrant community in the region experiencing fear or stigma related to having to show identification or proof of citizenship.

"Even though we at the Health District do not ask for proof of immigration status, people don't understand that, particularly since we're a government agency, and it's been a real challenge to get some of these folks to come in for services."

There were almost 80 references to the uninsured population in the key informant interviews and lack of health insurance was raised as a barrier or challenge to achieving health in the community 19 times. Lack of health insurance was most often brought up in context of patients having limited financial resources and a factor to not accessing health care services. Participants discussed patients not having the ability to pay fees for multiple appointment co-pays or not seeking care due to competing financial priorities. While health care services may be available in the community, for those who are lacking health insurance, accessing health care services is not necessarily an option. Lack of health insurance creates a particular challenge for those who require specialty care services.

"I think those are the biggest two—access, again, with the majority of our adult population being uninsured, having them try to find a provider that, again, will take sliding fee scale, or reduced rates. Once they're able to access those services, then it becomes a matter of paying for the things that are needed. The patient comes in and we diagnose them with diabetes, then comes the cost of medications, and if that patient is needing specialty care outside of the scope of primary care, access to specialists."

Participants brought up issues related to low income or groups who may be underserved in the community 115 times during the key informant interview process. Particular groups that participants felt may experience added challenges accessing health care services included the immigrant population, individuals with disabilities, families with young children, and the elderly. Several participants noted fees related to co-pays or out of pocket expenses as a barrier to patients seeking initial preventative services or ongoing treatment for chronic conditions. Participants identified several groups they felt were underserved in the community. Multiple participants discussed the unique and specific challenges with providing culturally appropriate care for a diverse and recent immigrant population in the community. Participants felt that families with young children and the elderly population are particularly vulnerable groups in the community that experience barriers and challenges accessing health care services. Specifically, participants discussed these groups experiencing high levels of poverty placing them at higher risk for poor health outcomes.

"Most of them are extremely low income and they fall in those categories where we have a significant number of elderly disabled, single moms and their children, so vulnerable folks here in Houston."

Emotional Well-Being

Key Issues:

- Mental health as part of overall health
- Need for more behavioral health services and providers
- Alcohol and substance abuse
- Alzheimer's and dementia.

Secondary Data

Mental Health and Substance Abuse were identified as significant needs for Memorial Hermann Health System. As shown in Table 19, there are several indicators related to Mental Health & Mental Disorders with data scores greater than 1.5. In Harris County, 11.4% of the Medicare Population has Alzheimer's Disease or Dementia, which is higher than the U.S. value (9.9%). Moreover, 80% of residents in Harris County reported having 5 or more poor mental health days in the past month. In Fort Bend County, an indicator of concern is the Mental Health Provider Rate (with an indicator score above 2). Fort Bend County's rate of 59.8 providers per 100,000 population is approximately forty percent lower than the state's value (98.8) and less than one third of the national value (214.3).

Table 19. Secondary Data Scoring Results: Mental Health & Mental Disorders

	County County Value Compared to:							
Indicator	Name	Value	Data Score	TX Counties	TX Value	US Value	HP 2020 Target	Trend Over Time

Substance Abuse is another topic of concern in Fort Bend and Harris counties. For both counties, the proportion of alcohol-impaired driving deaths is higher than the state and the U.S.

There were 36% alcohol-impaired driving deaths in Fort Bend County and 37.8% in Harris County, compared to 28.3% and 29.3% in Texas and the U.S., respectively (Table 20).

[4] County Health Rankings										

Primary Data

Approximately 50% of community survey respondents cited Mental Health as one of the top issues most affecting the quality of life in their community and 52% of respondents noted Substance Abuse. In interviews with key informants, Mental Health was discussed 113 times and was raised by participants 33 times as a needs or concern for the health of the community. The primary themes related to Mental Health were treating mental health as part of overall health, address behavioral health in school, need for behavioral health providers and services and older adults with Alzheimer's and dementia.

Some participants discussed a recent shift in care delivery and the continued need to address mental health as part of a person's total health similarly to how chronic disease is managed. One particularly vulnerable population that would benefit from a broader approach to treatment, inclusive of mental health, is the homeless population. Several participants brought up issues regarding a need for more behavioral health providers and services in the community.

"(...) I think there needs to be more work around funding for behavioral health but also funding for recruiting and training therapists and behavioral health specialists to address substance abuse, anxiety, depression and suicidality."

One participant observed recent increases and changes within the local population. From the participant's perspective, there should be more programs or services to address the growing need for addressing mental health in the community. Another participant suggested solutions for addressing the need for more behavioral health providers in the community such as expanding residency programs for psychiatrists and developing comprehensive telemedicine programs to provide services more efficiently.

Furthermore, participants recommended addressing behavioral health with younger populations in the schools. Schools that provide behavioral health services through telemedicine have been received well in the community and the perception is that they are

effective. Some participants believe that these programs should be expanded and available across the community.

"There [are] the mental health units that have gone out into the schools. They're not school-based but that's the venue they will drive to with their mobile units. They have a big impact. They're seeing thousands of kids. They've done some telemedicine with mental health, behavioral health, with some of the high schools. From what I've heard, (...) it's been pretty effective and well received."

A challenge that health care providers identified for the medical community is adequately addressing dementia and Alzheimer's within the geriatric population.

"Dementia's a terminal illness. (...) Much more needs to be done with healthcare systems around routine screening and identification of it as an issue. (...) So, that is the first thing that needs to happen. Then there needs to be an understanding that there are things – there are medications that can be helpful to the systems of the dementia. (...) But you can affect it by addressing some of the symptoms."

Substance Abuse was discussed 55 times and was raised by participants 15 times as a need or concern for the health of the community. Multiple unique themes emerged from the key informant interviews related to Substance Abuse: funding for treatment programs, invisibility of alcoholism, overcoming stigma of seeking treatment, and emerging shifts in outreach models. Participants identified funding for programs and availability of services for those who may not be able to afford treatment out-of-pocket as issues the community is facing to address substance abuse. One participant raised alcohol abuse specifically as an issue in the community that does not get the amount of attention of other substance abuse topics but may in fact be impacting a larger proportion of the population and connected to many other health issues. Multiple participants identified cultural stigma as a barrier for those who may benefit from seeking treatment. Stigma or fear may be unique and vary from population to population in the community.

"With substance abuse, it's culture and stigma. Nobody goes to substance abuse treatment on their own. They may not be adjudicated but someone is really, really pushing them, family member, boss. No one goes to treatment if they're not under duress."

A few participants described unique approaches to outreach and substance abuse treatment in the community that would support removing barriers for people having to take the first step on their own.

"For instance, it's pretty new, but there's an initiative that's called the Heroes Project that's looking at overdoses, so when an overdose happens, they're sending a team to the ER. So, it's got a peer support specialist, the EMP is involved – but they actually go in to the ER and they do an intervention there to try to help with linkage to treatment so that we can assist the patients."

Food as Health

Key Issues:

- · Food insecurity and limited access to healthy foods
- Diabetes and heart disease linked to socioeconomic factors
- Sedentary lifestyle and driving culture

Secondary Data

The topics of Diabetes and Heart Disease & Stroke emerged as significant health needs. Heart Disease & Stroke rose to the top of the secondary data scoring results for Memorial Hermann Health System. Although Diabetes was not in the top results of the secondary data scoring, an indicator of concern for both Fort Bend and Harris counties is the proportion of diabetes in the Medicare population, with values of 30.8% and 28.1% respectively, compared to 26.5% in the U.S. (Table 21).

[3] Centers for Medicare & Medicaid Services										

As shown in Table 22, another indicator of concern is Stroke in the Medicare Population with proportions of 4.7% and 5.2% in Fort Bend and Harris counties, respectively, compared to 4% in the U.S. Furthermore, in Fort Bend County the percentage of Hyperlipidemia (46.6%) in the Medicare Population is higher than the national value.

[17] U.S. Department of Agriculture - Food Environment Atlas								

Primary Data

Food-related topics emerged in the community input gathered through the survey and key informant interviews. Food Insecurity, Food Programs and Food Knowledge issues were discussed over 170 times during the key informant interviews and were raised by participants 34 times in relation to barriers or challenges to achieving health in the community. The primary themes related to barriers or challenges that emerged in the interviews were access to healthy foods and affordability, knowledge gaps and limited food familiarity and program limitations.

The most common issue raised by key informant participants related to food insecurity was community members not being able to access healthy foods in their community. Multiple participants believed that in many communities, healthy food options were not available to people within a five-mile radius from their home or work. Participants described 'food deserts' as a top issue affecting health in the community and how limited access to healthy foods also was closely associated with people also being not being able to afford healthy foods. Participants also discussed the imbalance of healthy food options for those communities with lower housing prices and in general, lower average incomes. One participant described the link between people having to work multiple jobs and having time to shop for and prepare healthy foods.

"We have a grocery store on every corner but not every corner in the poor neighborhoods. It's been my personal experience that eating healthy is expensive. It costs more money to buy healthy fruits and vegetables and more healthy food, in general than it does to buy food that's not so healthy, that's high fat, high carb, high sugar.... It costs more money. It takes longer to prepare. When you have a mom and a dad or either and they're trying to handle two jobs, if not three. They've got kids of varying ages. The mechanics of shopping and preparing meals is probably an activity that gets let go."

Some participants had direct experience with educating the community about healthy foods and eating. These participants shared that for some community members, their knowledge of fresh fruits and vegetables is limited and would benefit from early education for parents and children in schools.

In Memorial Hermann's community survey, 67% of respondents selected Diabetes as one of the top issues most affecting the quality of life in their community. During key informant interviews, Diabetes was discussed 64 times and was raised by participants 32 times as a health need or concern in the community. For those participants who raised Diabetes as a top health issue in the community, unique themes emerged regarding how diabetes is impacting specific groups in the community and the way a sedentary lifestyle impacts diabetes. Multiple participants attributed the surge in obesity and diabetes in general in the U.S. to a shift to a more sedentary lifestyle while others specifically identified the local climate and driving culture as key factors leading to an increase in sedentary lifestyles impacting the region.

Heart Disease & Stroke was discussed 34 times during the key informant interviews and was raised by participants 16 times as a health need or concern in the community. For those participants who raised Heart Disease & Stroke as a top health issue in the community, the unique themes that emerged in the interviews were chronic disease risk related to socioeconomic status and challenges with managing heart-related conditions.

"You have so many communities that are food deserts so, of course, I think we are all at risk for things like diabetes and hypertension, obesity, stroke – but, I think in addition to that, those that are most are already marginalized. People who are low income. Low socioeconomic status. So, education, and all of those indicators are probably even more at risk for chronic diseases than someone, for example, who has access to care and insurance. So, they probably are doubly at risk."

Exercise Is Medicine

Key Issues:

- Obesity
- Walkability of communities
- Safety of outdoor spaces and places to exercise

Secondary Data

Exercise, Nutrition & Weight was the third highest-ranking topic in the secondary data scoring results for Fort Bend County and fifth for Memorial Hermann Health System. Although Exercise, Nutrition & Weight did not rise to the top of the secondary data scoring results for Harris County, there are indicators of concern for both Fort Bend and Harris counties (Table 24). In Fort Bend and Harris counties, an exercise-related indicator with data score above 2 is: Workers Who Walk to Work.

Table 24. Secondary Data Scoring Results: Exercise, Nutrition & Weight

Work [1] (2012-2016)	Harris	1.5 percent	2.17	2	2	3	3	1.5
[1] American Community	Survey							

Primary Data

Over 60% of Memorial Hermann's community survey respondents noted Obesity as a top issue affecting the quality of life in their community. In key informant interviews, Exercise, Nutrition & Weight was discussed almost 170 times and was raised by participants 42 times as a need or concern for achieving health in the community. The primary barriers related to Exercise, Nutrition & Weight identified by participants were walkability, access to safe outdoor spaces and programming that may not meet the needs of communities facing financial limitations.

Several participants discussed barriers to healthy lifestyle changes and described communities where sidewalks are limited or pedestrian pathways are not available. The ability for community members to make small shifts in their daily lives, such as walking regularly, may be more feasible than undertaking an exercise regimen. The limitations of pedestrian pathways and safer walking spaces prevent those in some sections of the community from making these shifts.

For individuals who may not be able to afford gym memberships nor attend classes due to work schedules, outdoor activities and fitness areas offer a free alternative. Participants felt that in many neighborhoods, these outdoor spaces are not available due to disrepair or unsafe environments.

"I think the built environment is huge, too. If you live out in a planned community, they usually have walking trails, or they have a pretty fountain area for you to walk around it. They have those little exercise things that you stop on part way around the trail and you do your little push-ups and your situps and your pull-ups (...) You go into these poorer areas and there's no sidewalks. There's no lights at night. There's a park—it's all rusted equipment."

Participants also described programs and facilities that are either limited or lacking. These programs included free exercise programs with child care options, youth sports leagues and recess in the schools and free or low-cost options for air-conditioned facilities during times of the year when the weather does not permit outdoor activities.

"In poor areas of Houston, there's just not a lot of parks. There's no little league, and there's no soccer leagues, and so, there's not a lot of recess in the schools. There's just not—the culture among the kids is just not being created around physical activity."

Non-Prioritized Significant Health Needs

The following additional significant health needs emerged from a review of the primary and secondary data. With the need to focus on the prioritized health needs described above, these topics are not specifically prioritized efforts in the 2019-2022 Implementation Strategy. However, due to the interrelationships of social determinant needs many of these areas fall, tangentially, within the prioritized health needs and will be addressed through the upstream efforts of the prioritized health needs. Additionally, many of them are addressed within ongoing programs and services. Examples of these efforts are provided below by topic area.

Older Adults and Aging

Secondary Data

The secondary data scoring results revealed the topic of Older Adults and Aging as a significant health need for both Fort Bend and Harris counties. Older Adults and Aging was in the top 10 topics for Fort Bend County and received a topic score of 1.5 in the secondary data results for Harris County. In Fort Bend County, indicators of concern included Stroke, Diabetes, Chronic Kidney Disease, and Hyperlipidemia (all in the Medicare Population). Indicators of note in Harris County included: Chronic Kidney Disease and Stroke in the Medicare Population as well as Age-Adjusted Death Rate due to Falls.

Primary Data

Key informants and stakeholders discussed Older Adults and Aging. Over 62% of participants in Memorial Hermann Health System's prioritization process cited Older Adults as one of the groups most affected by poor health outcomes. Interviews with key informants noted the growing population of older adults and needs related to specialized care, financial assistance and outreach.

"...[W]e are going to watch the literal doubling of the number of Americans over the age of 65 in the next 25 years. Every day, between now and 2030, day after day, 10,000 Americans will turn 65, so we are watching an extraordinary expansion of challenges of aging. (...) [M]ore and more Americans are going to be getting old, so caring for this massive increase in the aging population is going to be one of the great challenges I think."

Efforts

Memorial Hermann Health System includes two freestanding Rehabilitation Hospitals (TIRR and Katy) as well as a senior living facility (University Place), featuring independent living, personal assistance services, and a separate, but attached, nursing center.

Additional community outreach includes health education on: Alzheimer's disease, Discounted Diabetes Education, Education/outreach for Seniors, Injury Prevention, Fall Prevention, and support groups for various populations, including: Alzheimer's, Amputees, Cardiac patients, Chronic disease, Diabetics, Grief, Parkinson's disease, Stroke, Survivorship, and more.

Cancers

Secondary Data

Although Cancer was not one of the top ten topics in the secondary data scoring results for Fort Bend and Harris counties, there are certain indicators to note. In Fort Bend County, indicators with indicator scores equal to or above 1.5 are Cancer in the Medicare Population and Prostate Cancer Incidence Rate. In Harris County, several indicators are of concern including: Cervical Cancer Incidence Rate and Age-Adjusted Death Rate due to Breast Cancer (both with indicator scores above 2), Cancer in the Medicare Population, Colon Cancer Screening, and Age-Adjusted Death Rate due to Prostate Cancer.

Primary Data

In Memorial Hermann's community survey, over one third of respondents noted Cancer as a top issue affecting the quality of life in their community. Interviews with key informants revealed the importance of making cancer screening services and specialty care available and accessible (e.g., telehealth, mobile mammography).

Efforts

As leading providers of cancer treatment in Houston, Memorial Hermann Cancer Centers are committed to cancer treatment, prevention, and research. Their broad geographical coverage makes cancer treatment extremely accessible and convenient to where patients live or work. All eight Memorial Hermann Cancer Centers are approved by the American College of Surgeons Commission on Cancer (ACoS CoC); only 25 percent of hospitals across the country have received this special recognition. With guaranteed access to comprehensive care, collaborative team approach for coordinating the best available treatment options, state-of-the-art equipment and services, education and support, and lifelong patient follow-up through the Cancer Registry, patients are able to access a full menu of therapies and treatment options.

Additional outreach includes education and support groups for cancer patients: Art, Self-guided Art Therapy, Lymphedema, Brest Cancer, Oncology Nutrition Therapy, Stress Relief, Look Good Feel Better, Yoga, Meditation, and Healthy Eating Advices.

Education

Secondary Data

Education received a topic score of 1.56 in the secondary data results for Harris County. There are several education-related indicators to consider: Infants Born to Mothers with Less Than 12 Years of Education (with a value of 27.5% in Harris County, compared to 21.3% in Texas and 15.9% in the U.S.), Student-to-Teacher Ratio, High School Drop Out Rate, and People 25+ with a High School Degree or Higher.

Primary Data

During key informant interviews, the topic of Education came up frequently and in relation to different focus areas and target audiences, including children, general community members as well as providers. The link between individuals' level of education and quality of life was

emphasized. Key informants recommended finding opportunities to expand the availability of education (related to health and non-health topics) as well as integrating health education into existing activities in both clinical and non-clinical settings, such as schools and churches. Opportunities were also pointed out to educate healthcare providers (and provide continuing education) on available community linkages and resources and on how to initiate conversations with patients regarding different health topics.

"We want to go into different groups and educate them on what they should be doing or shouldn't be doing. (...) I think education is a huge component but we've got to figure out how to integrate that. The education, without the integration into somebody's lifestyle, doesn't do them any good."

Efforts

Memorial Hermann operates ten Health Centers for Schools, established in 1996, offering access to primary medical, dental and mental health services to underserved children at 82 schools in the Greater Houston Area. Research shows that school-based health centers increase educational success by providing medical and mental health care that allows students to stay in school and learn. The primary goal of the program is to keep children healthy and feeling well so that they stay in school and can perform well academically, creating a foundation for a brighter future. By providing improved access to health care to at-risk children across the region, Memorial Hermann has demonstrated success in creating healthier outcomes for kids, including improvements in their physical health, their mental wellbeing, and even their attendance rate at school.

Transportation

Secondary Data

For both Fort Bend and Harris counties, Transportation rose to the top of the secondary data scoring results, with a topic score of 1.83 in Fort Bend County and 1.82 in Harris County. In both counties, indicators of concern include: Solo Drivers with a Long Commute, Mean Travel Time to Work, and Workers who Walk to Work. Furthermore, there exist high disparities for a few of these indicators. In Fort Bend County, an additional indicator to note includes Workers who Drive Alone to Work (with an indicator score of 1.94).

Primary Data

Participants raised the topic of Transportation 59 times in relation to barriers or challenges to achieving health in the community – more than any other topic. Key informants repeatedly noted that the Houston region has significant transportation issues (including availability, accessibility) that impact community members' ability to access health programs and services. In addition to limited options for public transportation, travel cost and time were brought up. Moreover, for certain populations, like older adults or people with disabilities, public transportation is not a feasible option.

"This remarkable spread-out city, the size of Massachusetts, is the Greater Houston Metropolitan Area. (...) This is not a city and a suburb anymore, it's a metropolitan region with eight to ten centers of activity that are larger than downtown San Diego, spread out over this massive area, but getting from one place to another is an increasing challenge. Poverty also means inadequate transportation, we have no really

good transit system because it's almost impossible to develop a good transit system for a city so lacking in density and so spread out as Houston is. We haven't solved that problem, and a lot of the healthcare issues come because people [are] without a car trying to get to a hospital, or to healthcare..."

Efforts

Memorial Hermann provides bus and taxi tokens as required for discharge and continuity of care needs.

One Memorial Hermann strategic effort to not only provide the right care at the right time in the right place, but also provide the opportunity to access help/care via the telephone is the Memorial Hermann Nurse Health Line. Established in 2014, the Nurse Health Line is a free telephone service for Greater Houston residents who are experiencing a health concern and are unsure of what to do or where to go. Experienced, bilingual nurses use their training and expertise to conduct assessments by phone, and are available to answer calls 24 hours a day, seven day a week for any resident living in Harris or surrounding counties. They help callers decide when and where to go for medical care and assist with social service referrals and transportation needs.

Children's Health

Secondary Data

Children's Health received a topic score of 1.52 in Harris County. Particular indicators to note include: Children with Health Insurance, Child Food Insecurity Rate, and Children with Low Access to a Grocery Store. Close to 10% of children in Harris County do not have health insurance. Although Children's Health did not receive a topic score above 1.5 in Fort Bend County, an indicator of concern is: Children with Low Access to a Grocery Store.

Primary Data

When discussing Children's Health, key informants pointed out specific issues such as childhood obesity, access to services and being uninsured. Some participants advised efforts to engage children, families and communities more comprehensively.

"Texas ranks very low in dollars spent on health for children. We rank low in our ranking, generally, in children's health. We're not putting enough money and resources into it. I think we need to shift our attention and (...) give more attention to children's health and how important it is for early childhood development and for brain development and ongoing health in the rest of their lives. I would say put that as a priority. Put children's health as a priority. Not just saying the early years, not just saying zero to five but also throughout early adolescence, pre-adolescence, early adolescence and into the teens."

Efforts

Children's Memorial Hermann Hospital, licensed under Memorial Hermann Texas Medical Center, was founded in 1986 and is the primary teaching hospital for the pediatric and obstetrics/gynecology programs at The University of Texas Medical School at Houston. Children's Memorial Hermann offers care in more than thirty pediatric and women's related specialties including the latest advances in maternal-fetal medicine and neonatal critical care

services, and renowned programs in pediatric trauma, neurosciences, pulmonology and cardiac care. More than 37,000 children come to Children's Memorial Hermann Hospital each year. In addition to Memorial Hermann's school-based health efforts described above, Memorial Hermann is an on-going financial collaborator with Children at Risk, a 501 non-profit organization that drives change for children through research, education, and influencing public policy.

Economy

Secondary Data

With a topic score of 1.55, Economy was one of the top ten topics in the secondary data scoring results for Harris County. In particular, eight economic indicators had scores above 2: Homeownership, Severe Housing Problems, Students Eligible for the Free Lunch Program, Median Monthly Owner Costs for Households without a Mortgage, SNAP Certified Stores, Median Household Gross Rent, Families Living Below Poverty Level, and Food Insecurity Rate. Eight additional indicators received scores between 1.5 and 2. Although Economy was not a main topic for Fort Bend County, there are several economic indicators to note: Median Household Gross Rent, Median Monthly Owner Costs for Households without a Mortgage, Mortgaged Owners Median Monthly Household Costs (all with indicator scores above 2); as well as SNAP Certified Stores, Unemployed Workers in a Civilian Labor Force, Food Insecurity Rate, and Low-Income and Low Access to a Grocery Store (with indicator scores between 1.5 and 2).

Primary Data

Key informants discussed food insecurity and food deserts as factors related to poor health outcomes. They pointed out that, although individuals might understand that eating healthy foods is recommended, they may not have access to grocery stores or be able to afford healthier food options. Key informants noted the importance of addressing socioeconomic barriers to improve health and wellbeing.

"(...) That's a matter of money. You can educate [a] woman all day long, but if she's got a couple of kids to feed and she can feed them all for seven dollars as opposed to 25, she's going to go to McDonald's."

Efforts

It's a daunting task in a region like Greater Houston, which has an estimated 7 million people and one of the highest rates of uninsured and underinsured in the country. But Memorial Hermann believes that we can ONLY impact the health of our community, and the health of individuals, by focusing on the multiple determinants of health that play the greatest role in influencing a person's overall health and wellbeing.

Other Findings

Critical components in assessing the needs of a community are identifying barriers and disparities in health care. The identification of barriers and disparities helps inform and focus strategies for addressing prioritized health needs. The following section outlines barriers across Memorial Hermann Health System and disparities as they pertain to MHMC's service area.

Barriers to Care

Community input revealed a wide range of barriers to care and wellbeing. As discussed in the previous section, transportation was the most frequently cited barrier in the community, followed by other barriers such as access to health services, healthy food and exercise options, low income, and food insecurity. Overall, the secondary and primary data confirmed that socioeconomic factors impact community members' ability to achieve good health.

"Many things come back to poverty and lack of disposable income."

Key informants described the influence of social determinants of health (including income, poverty, language, education, employment) on health outcomes. Participants discussed the importance of addressing social and economic factors to get at the root causes of poor health and wellbeing.

"I think you have to understand that a lot of folks work from paycheck to paycheck, so if they actually end up at one of these medical centers and they require a thirty dollar copay or ten dollars or fifteen dollars, then they're not going to have it. So, they're going to walk away until they do have that money and that could be months later. So, if they are sick, they're just going to become sicker. So, that's one of the big barriers."

Disparities

Significant community health disparities are assessed in both the primary and secondary data collection processes. Table 25 identifies the number of secondary data health indicators with a health disparity for MHMC's service area. See Appendix B for the specific indicators with significant disparities.

Table 25. Number of Health Disparities Identified in Secondary Data Analysis

Fort Bend County	Harris County
Hispanic or Latino (7)	Black or African American (13)
Other Race (7)	White (8)
Black or African American (6)	Hispanic or Latino (8)
White (4)	Other Race (7)
	American Indian or Alaska Native (6)
Male (5)	Male (10)
	Female (3)
65+ years of age (2)	<6 years of age (2)
	25-44 years of age (2)
	45-64 years of age (2)
	65+ years of age (2)

Geographic disparities were identified using the SocioNeeds Index. As shown earlier in Table 13, zip codes 77036, 77072, 77080, 77088, 77091, and 77099 in Harris County were identified as zip codes with the highest socioeconomic need, potentially indicating poorer health outcomes for residents in those areas. The zip codes with largest proportion of inpatient discharges at MHMC, zip codes 77080 and 77055, have SocioNeeds Index values of 95.6 and 82.6, respectively.

Conclusion

The Community Health Needs Assessment for MHMC utilized a comprehensive set of secondary data indicators to measure the health and quality of life needs for MHMC's service area. Furthermore, this assessment was informed by input from knowledgeable and diverse individuals representing the broad interests of the community. Memorial Hermann's system-wide prioritization process resulted in four focus areas or pillars: Access to Healthcare, Emotional Well-Being, Food as Health, and Exercise Is Medicine. MHMC will review these priorities more closely during the Implementation Strategy development process and design a plan for addressing these pillars moving forward.

In addition, MHMC invites your feedback on this CHNA report to help inform the next Community Health Needs Assessment process. If you have any feedback or remarks, please send them to: Deborah.Ganelin@memorialhermann.org.

Priority 3: Behavioral Health

The following tables provide strategies and outcome indicators that reflect an MHHS system-wide approach to Behavioral Health. Data is not specific to MH Memorial City Hospital but to the community at large with the exception of reduction in ER encounters that result in a psychiatric inpatient stay through linkages with a network of behavioral partners.

Priority 3: **Behavioral Health**

Ensure that all community members who are experiencing a mental health crisis have access to appropriate psychiatric Goal 3: specialists at the time of their crisis, are redirected away from the ER, are linked to a permanent, community based mental health provider, and have the necessary knowledge to navigate the system, regardless of their ability to pay.

Objective 3.1: Create nontraditional access points around the community (crisis/ambulatory, acute care, and community-based chronic care management) and link those who need services to permanent providers and resources in the community

management), and link those who need services to permanent providers and resources in the community					
Outcome Indicators:	Annual Baseline	Year 1	Year 2	FY 2020 Target

Appendix B. Secondary Data Methodology

Secondary Data Sources

The main source for the secondary data, or data that have been previously collected, is the community indicator database maintained by Conduent Healthy Communities Institute. The following is a list of both local and national sources used in Memorial Hermann Memorial City's Community Health Needs Assessment.

Fort Bend County

- 1. American Community Survey
- 2. Centers for Medicare & Medicaid Services
- 3. County Health Rankings
- 4. Feeding America
- 5. Institute for Health Metrics and Evaluation
- 6. National Cancer Institute
- 7. National Center for Education Statistics
- 8. Small Area Health Insurance Estimates
- 9. Texas Department of Family and Protective Services
- 10. Texas Department of State Health Services
- 11. Texas Education Agency
- 12. Texas Secretary of State
- 13. U.S. Bureau of Labor Statistics
- 14. U.S. Census County Business Patterns
- 15. U.S. Department of Agriculture Food Environment Atlas
- 16. U.S. Environmental Protection Agency

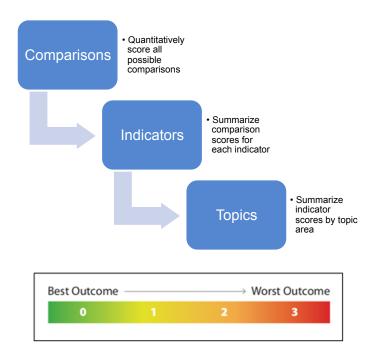

Harris County

- 1. American Community Survey
- 2. American Lung Association
- 3. Centers for Medicare & Medicaid Services
- 4. County Health Rankings
- 5. Feeding America
- 6. Institute for Health Metrics and Evaluation
- 7. National Cancer Institute
- 8. National Center for Education Statistics
- 9. Small Area Health Insurance Estimates
- 10. Texas Behavioral Risk Factor Surveillance System
- 11. Texas Department of Family and Protective Services
- 12. Texas Department of State Health Services
- 13. Texas Education Agency
- 14. Texas Secretary of State
- 15. U.S. Bureau of Labor Statistics
- 16. U.S. Census County Business Patterns

- 17. U.S. Department of Agriculture Food Environment Atlas
- 18. U.S. Environmental Protection Agency

Secondary Data Scoring

Data scoring is done in three stages:

For each indicator, each county in Memorial Hermann Memorial City's service area is assigned a score based on its comparison to other communities, whether health targets have been met, and the trend of the indicator value over time. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varies by indicator and is dependent upon the data source, comparability with data collected for other communities, and changes in methodology over time.

Indicators are categorized into topic areas and each topic area receives a score. Indicators may be categorized in more than one topic area. Topic scores are determined by the comparisons of all indicators within the topic.

Comparison to a Distribution of County Values: Within State and Nation

For ease of interpretation and analysis, indicator data on the Community Dashboard is visually represented as a green-yellow-red gauge showing how the community is faring against a distribution of counties in the state or the United States. A distribution is created by taking all county values within the state or nation, ordering them from low to high, and dividing them into three groups (green, yellow, red) based on their order. Indicators with the poorest comparisons ("in the red") scored high, whereas indicators with good comparisons ("in the green") scored low.

Comparison to Values: State, National, and Targets

Each county is compared to the state value, the national value, and target values. Target values include the nation-wide Healthy People 2020 (HP2020) goals. Healthy People 2020 goals are national objectives for improving the health of the nation set by the Department of Health and Human Services' (DHHS) Healthy People Initiative. For all value comparisons, the scoring depends on whether the county value is better or worse than the comparison value, as well as how close the county value is to the target value.

Trend Over Time

The Mann-Kendall statistical test for trend was used to assess whether the county value is increasing over time or decreasing over time, and whether the trend is statistically significant. The trend comparison uses the four most recent comparable values for the county, and statistical significance is determined at the 90% confidence level. For each indicator with values available for four time periods, scoring was determined by direction of the trend and statistical significance.

Missing Values

Indicator scores are calculated using the comparison scores, availability of which depends on the data source. If the comparison type is possible for an adequate proportion of indicators on the community dashboard, it will be included in the indicator score. After exclusion of comparison types with inadequate availability, all missing comparisons are substituted with a neutral score for the purposes of calculating the indicator's weighted average. When information is unknown due to lack of comparable data, the neutral value assumes that the missing comparison score is neither good nor bad.

Indicator Scoring

Indicator scores are calculated as a weighted average of all included comparison scores. If none of the included comparison types are possible for an indicator, no score is calculated and the indicator is excluded from the data scoring results.

Topic Scoring

Indicator scores are averaged by topic area to calculate topic scores. Each indicator may be included in up to three topic areas if appropriate. Resulting scores range from 0-3, where a higher score indicates a greater level of need as evidenced by the data. A topic score is only calculated if it includes at least three indicators.

Data Scoring Results

The following tables list each indicator by topic area for each of the counties in Memorial Hermann Memorial City's service area. Secondary data for this report are up to date as of November 2, 2018.

Fort Bend County

Key Informant Interview Questionnaire (Episcopal Health Foundation)

- Good morning/afternoon [NAME OF INFORMANT]. My name is [NAME OF INTERVIEWER], and I am with Health Resources in Action, a non-profit public health organization based in Boston. Thank you for speaking with me today.
- As we mentioned in our interview invitation, the Episcopal Health Foundation is coordinating an interview initiative to support four Greater Houston area hospital systems in preparing their community health needs assessments. The collaborating hospitals include CHI St. Luke's, Houston Methodist Hospital, Memorial Hermann Health System, and Texas Children's Hospital.
- The purpose of this interview is to gain a greater understanding of the health status and wellbeing of residents in the Greater Houston area and determine how these health needs are currently being addressed. Interviews like this one are being conducted with about 70 stakeholders from a range of sectors such as government, healthcare, business, and community service organizations. We are also interviewing community leaders with specific experience working with priority populations such as women, children, people of color, and the disabled to name a few.
- We are interested in hearing people's feedback on the needs of the broader Greater
 Houston community and the populations you work with as a leader in your community. The
 Foundation and the four hospitals welcome your critical feedback and suggestions for health
 improvement activities in the future. Your honesty during today's interview is encouraged
 and appreciated.
- As we mentioned in our interview invitation, the interview will last between 45 minutes to an hour and it will be recorded. After all the interviews are completed, Health Resources in Action will provide a transcript of your interview to the four hospitals for use in preparing their community health needs assessment reports. Each hospital will keep your interview transcript confidential and accessible only to the team that is preparing the community health needs assessment report. Health Resources in Action will also be preparing a report of the general themes that emerge across all the interviews to help the hospitals prepare their reports.
- The Foundation has asked Health Resources in Action to ask all interviewees how they wish any quotes from today's interview to be presented in reports. There are three options. Quotes may be presented anonymously without your name or organization, presented with your name and organization, or presented with only the sector you represent. Which option would you like to choose?
 - RECORD RESPONSE FROM INTERVIEWEE:
 ☐ Anonymous ☐ Name and organization ☐ Sector
- Thank you. We will note your choice in the transcript that we provide to the hospitals.

- IF THE RESPONDENT IS UNSURE AT THE TIME OF THE INTERVIEW: Ok, please feel free to think it over and we will follow up with you for your decision before we send the transcript to the hospitals.
- Do you have any questions before we begin? BEGIN RECORDING THE INTERVIEW

INTERVIEW QUESTIONNAIRE (55 MINUTES)

NOTES TO INTERVIEWER:

- INTERVIEW QUESTIONS MAY BE ADDED OR TAILORED TO MEET THE SPECIFIC POSITION/ROLE OF THE INTERVIEWEE
- THE QUESTIONS IN THE INTERVIEW QUESTIONNAIRE ARE INTENDED TO SERVE AS A <u>GUIDE</u>, NOT A SCRIPT

BACKGROUND (5 MINUTES)

- Can you tell me a little bit about your role at your organization/agency?
 - Has your organization/agency ever partnered with any of the four hospitals involved in this shared community health needs assessment before? IF SO, PROBE IN WHAT CAPACITY/PROGRAM
- How would you describe the community you represent/the community your organization serves/the Greater Houston population at large? What are some of its defining characteristics in terms of demographics? INTERVIEWER: ESTABLISH WHAT THE INFORMANT CONSIDERS THE COMMUNITY TO BE FROM THEIR PERSPECTIVE

COMMUNITY ISSUES (20 minutes)

INTERVIEWER: VARY THE LABEL OF 'COMMUNITY' BASED ON THE INFORMANT'S BACKGROUND AND HOW HE OR SHE DESCRIBES THE COMMUNITY; BE SURE TO PROBE ON WOMEN'S AND CHILDREN'S ISSUES TO ENSURE WE ADDRESS THE NEEDS OF THE CHILDREN'S HOSPITALS IN ALL OUESTIONS AS RELEVANT

- Thinking about the status of the community today, how would you rate the overall health status of residents on a scale of 1 to 5 with 1 being poor and 5 being very healthy?
- If you had to pick your top 3 <u>health</u> concerns in the community, what would they be? PROBE IN-DEPTH BASED ON INFORMANT AREA OF EXPERTISE
 - Who do you consider to be the populations in the community most vulnerable or at risk for these conditions/issues?
 - IF NOT YET MENTIONED, PROBE SPECIFICALLY ON PRIORITY POPULATION RELEVANT TO THE INFORMANT'S EXPERTISE: What do you think are the most pressing <u>health</u> concerns in the community for [PRIORITY POPULATION]?

- FOR INFORMANTS EXPERTISE WITH WOMEN AND CHILDREN: What do you think are the most pressing health concerns in the community for children and their families? How about for women?
- IF NOT YET DISCUSSED: Of the top three issues you mentioned, which would you rank as your top issue? How do you see this issue affecting community members' daily lives and their health? PROBE IN-DEPTH IN SPECIFIC FOCUS AREAS; MAY ASK ABOUT ONE ISSUE AT TIME AND FOCUS ON PERSON'S AREA OF EXPERTISE.
- From your experience, what are residents' biggest barriers to addressing the top 3 health issues you identified?

o PROBE: Social determinants of health?

PROBE: Barriers to accessing medical care?

PROBE: Barriers to accessing preventive services or programs?

FOCUS AREA: HEALTHY LIVING (5 MINUTES)

- I'd like to ask you about barriers affecting healthy living and the prevention of obesity.
 - What are some of the barriers to healthy eating and physical activity among the communities you serve?
 - What populations are most affected by barriers to healthy living and physical activity? PROBE ABOUT FOOD INSECURITY AND ACCESS TO SAFE SPACES FOR PHYSICAL ACTIVITY
 - What efforts or programs are you aware of that promote healthy living? PROBE ABOUT HEALTHY LIVING MATTERS COLLABORATIVE

ACCESS TO HEALTH CARE AND PUBLIC HEALTH/PREVENTION SERVICES (15 MINUTES)

- I'd like to ask you about access to health care and social services in your community.
 - What do you see as the strengths of the health care and social services in your community?
 - o What do you see as its limitations?
- What challenges/barriers do residents in your community face in accessing health care and social services? [PROBE IN DEPTH FOR BARRIERS TO CARE: INSURANCE ISSUES, LANGUAGE BARRIERS, ACCESS TO HEALTH INFORMATION/HEALTH LITERACY, LACK OF TRANSPORTION, CHILD CARE, ETC.]
 - What do you think needs to happen in the community you serve to help residents overcome or address these challenges?
- What programs, services, or policies are you aware of in the community that address access to health care and social services?
 - o In your opinion, how effective have these programs, services, or policies been at addressing the health needs of residents?

 What program, services, or policies are currently not available that you think should be?

IMPROVING THE HEALTH OF THE COMMUNITY/RESIDENTS (10 MINUTES)

- What do you think needs to happen in the community you serve to help residents overcome or address the challenges they face in being able to be healthy?
- Earlier in this interview, you mentioned [TOP ISSUE] as being your top health priority for area residents. What do you think needs to be done to address [TOP ISSUE HERE]?
 - What do you think hospitals can do to address this issue that they aren't doing right now? Do you have any suggestions about how hospitals can be creative or work outside their traditional role to address this issue and improve community health?
 - What kinds of opportunities are currently out there that can be seized upon to address these issues? For example, are there some "low hanging fruit" – current collaborations or initiatives that can be strengthened or expanded?

VISION FOR THE COMMUNITY (5 MINUTES)

• The hospitals involved in this initiative will be planning their strategy to improve the health of the communities they serve. What advice do you have for the group developing the plan to address the top health needs you've mentioned?

CLOSING (5 MINUTES)

Thank you so much for your time. That's it for my questions. Is there anything else that you would like to mention that we didn't discuss today?

As I mentioned, after all of the interviews are completed, we will be sending your interview transcripts to the four hospitals. Each hospital will make their community health needs assessment reports publicly available when they are complete. If you have any questions, please feel free to reach out to Jennifer Mineo at the Episcopal Health Foundation who is coordinating this effort on behalf of the four hospitals. Thank you again. Have a good morning/afternoon.

Key Informant Interview Questionnaire (Conduent Healthy Communities Institute)

Good morning/afternoon [NAME OF INFORMANT]. My name is [NAME OF INTERVIEWER], and I am with Conduent Healthy Communities Institute. My colleague [name] is also on the line. We are working with Memorial Hermann Health System to conduct a Community Health Needs Assessment.

- The purpose of this interview is to gain a greater understanding of the health status and wellbeing of residents in the Greater Houston area and determine how these health needs are currently being addressed. Interviews like this one are being conducted with about 12 stakeholders from a range of sectors such as government, healthcare, business, and community service organizations. We are also interviewing community leaders with specific experience working with priority populations such as women, children, people of color, and the disabled to name a few.
- We are interested in hearing people's feedback on the needs of the community and the
 populations you work with as a leader in your community. Memorial Hermann welcome
 your critical feedback and suggestions for health improvement activities in the future. Your
 honesty during today's interview is encouraged and appreciated.
- As we mentioned in our interview invitation, the interview will last between 45 minutes to an hour and it will be recorded. After all the interviews are completed, we will analyze and summarize all the interviews to incorporate into the community health needs assessment reports. Each MH hospital will keep your interview transcript confidential and accessible only to the team that is preparing the community health needs assessment report.
- Memorial Hermann has asked HCl to ask all interviewees how they wish any quotes from today's interview to be presented in reports. There are three options. Quotes may be presented anonymously without your name or organization, presented with your name and organization, or presented with only the sector you represent.
 - Which option would you like to choose?
 - RECORD RESPONSE FROM INTERVIEWEE:

 ☐ Anonymous ☐ Name and organization ☐ Sector
- Thank you. We will note your choice in the transcript that we provide to the hospitals.
 - IF THE RESPONDENT IS UNSURE AT THE TIME OF THE INTERVIEW: Ok, please feel free to think it over and we will follow up with you for your decision before we send the transcript to the hospitals.
 - Do you have any questions before we begin? BEGIN RECORDING THE INTERVIEW

INTERVIEW QUESTIONNAIRE (55 MINUTES)

NOTES TO INTERVIEWER:

- INTERVIEW QUESTIONS MAY BE ADDED OR TAILORED TO MEET THE SPECIFIC POSITION/ROLE OF THE INTERVIEWEE
- THE QUESTIONS IN THE INTERVIEW QUESTIONNAIRE ARE INTENDED TO SERVE AS A <u>GUIDE</u>, NOT A SCRIPT

BACKGROUND (5 MINUTES)

- Can you tell me a little bit about your role at your organization?
 - Has your organization/agency ever partnered with MH's community health needs assessment before? IF SO, PROBE IN WHAT CAPACITY/PROGRAM
- How would you describe the community you represent/the community your organization serves? What are some of its defining characteristics in terms of demographics?
 INTERVIEWER: ESTABLISH WHAT THE INFORMANT CONSIDERS THE COMMUNITY TO BE FROM THEIR PERSPECTIVE

COMMUNITY ISSUES (20 minutes)

INTERVIEWER: VARY THE LABEL OF 'COMMUNITY' BASED ON THE INFORMANT'S BACKGROUND AND HOW HE OR SHE DESCRIBES THE COMMUNITY; BE SURE TO PROBE ON WOMEN'S AND CHILDREN'S ISSUES TO ENSURE WE ADDRESS THE NEEDS OF THE CHILDREN'S HOSPITALS IN ALL QUESTIONS AS RELEVANT

- Thinking about the status of the community today, how would you rate the overall health status of residents on a scale of 1 to 5 with 1 being poor and 5 being very healthy?

VISION FOR THE COMMUNITY (5 MINUTES)

• The hospitals involved in this initiative will be planning their strategy to improve the health of the communities they serve.

What advice do you have for the group developing the plan to address the top health needs you've mentioned?

CLOSING (5 MINUTES)

Thank you so much for your time. That's it for my questions. Is there anything else that you would like to mention that we didn't discuss today?

As I mentioned, after all of the interviews are completed, we will be sending your interview transcripts to Memorial Hermann. The community health needs assessment reports will be **publicly** available when they are complete. If you have any questions, please feel free to reach out to Deborah Ganelin at Memorial Hermann who is coordinating this effort. Thank you again. Have a good morning/afternoon.

Community Survey (English)

Memorial Hermann Health System is conducting a Community Health Needs Assessment for the Greater Houston area. This assessment allows Memorial Hermann to better understand the health status and needs of the community and use the knowledge gained to implement programs that will benefit the community.

We can better understand community needs by gathering voices from the community. This survey allows community members like you to tell us about what you feel are important issues for your community.

We estimate that it will take about 5 minutes to complete this survey.

Thank you very much for your input and your time!

1.	Please look at this list of community issues. In your opinion, what are the top 5 issues most
	affecting the quality of life in your community?
	□ Diabetes
	☐ Obesity/Overweight
	☐ Respiratory/Lung Disease (asthma, COPD, etc.)
	□ Cancers
	☐ Mental Health and Mental Disorders
	☐ Injuries, Violence and Safety
	☐ Substance Abuse (alcohol, tobacco, drugs, etc.)
	☐ Oral Health
	☐ Heart Disease and Stroke
	☐ Sexual Health (HIV/AIDS, STDs, etc.)
	☐ Teenage Pregnancy
	□ Elder Care
	☐ Reproductive Health (family planning)
	Other (please specify):
2.	How would you rate your own personal health?
۷.	□ Very healthy
	□ Somewhat healthy
	□ Unhealthy
	□ Very unhealthy
	, ,
3.	About how many times a week do you exercise or perform a physical activity like walking,
	running, bicycling, etc.?
	☐ Less than 1 time a week
	□ 2-3 times a week
	☐ 5 or more times a week
	□ Never
	Other (please specify):

□ No places t □ No time to □ I don't like □ Feel unsafe □ None of m □ No childcar □ Lack of fun □ No transpo	exercise exercising e exercising in the community y friends or family exercise re ds to pay for gym or classes	exercising o	on a regula	r basis for yo	u?

Community Survey (Spanish)

Memorial Hermann Health System está realizando una Evaluación de las Necesidades de Salud de la Comunidad en el área metropolitana de Houston. Esta evaluación permite a Memorial Hermann comprender mejor el estado de salud y las necesidades de la comunidad, así como usar la información obtenida para poner en práctica programas que beneficien a la comunidad.

Calculamos que le tomará unos 5 minutos completar esta encuesta.

1. Lea la lista de problemas de la comunidad. En su օլ	oinión ¿cuáles son los <u>5 problemas que más</u>
afectan la calidad de vida en su comunidad?	
□ Diabetes	☐ Salud bucal
□ Obesidad/sobrepeso	☐ Enfermedades cardíacas y accidentes
□ Enfermedades respiratorias/pulmonares	cerebrovasculares
(asma, enfermedad pulmonar obstructiva	□ Salud sexual (VIH/sida, enfermedades
crónica [EPOC], etc.)	de transmisión sexual [ETS], etc.)
□ Cáncer	☐ Embarazos de adolescentes
☐ Salud mental y trastornos mentales	□ Cuidado de ancianos
□ Lesiones, violencia y seguridad	□ Salud reproductiva (planificación familiar)
□ Drogodependencia (alcohol, tabaco, drogas,	
etc.)	
□ Otros, (especifique):	
2. ¿Cómo calificaría su propia salud personal?	
□ Muy buena	□ Mala
□ Bastante buena	□ Muy mala
3. ¿Aproximadamente, cuántas veces por semana hac correr, andar en bicicleta, etc.?	ce ejercicio o alguna actividad física, como caminar,
□ Menos de 1 vez por semana	□ 5 o más veces por semana
□ De 2 a 3 veces por semana	□ Nunca
□ Otros, (especifique):	
4. ¿Cuáles son algunas de las barreras o dificultades o	que le impiden hacer ejercicio regularmente?
□ No tengo un lugar donde hacer ejercicio.	□ No tengo con quién dejar a mis hijos mientras
□ No tengo tiempo para hacer ejercicio.	hago ejercicio.
□ No me gusta hacer ejercicio.	□ No tengo dinero para pagar un gimnasio o
□ No me siento seguro/a haciendo ejercicio en	clases.
mi comunidad.	☐ No tengo acceso a transporte.
□ Ninguno de mis amigos o familiares hacen	•
ejercicio.	
□ Otros. (especifique):	

5. ¿Le ha dicho su médico alguna de las siguientes afecci	ones? (Mar	que todas	las opciones	que
correspondan).				
□ Presión arterial alta	□ Obesid	ad		
□ Colesterol alto	□ Asma			
□ Cáncer	□ Enferm	nedad cardi	aca	
□ Diabetes				
□ Otros, (especifique):				
6. ¿En qué medida está de acuerdo o en desacuerdo con	cada una c	de las siguie	entes afirmac	iones?
	Muy de	De	En	Muy en
	acuerdo	acuerdo	desacuerdo	desacuerdo
En mi comunidad, hay buenos parques para niños, adultos y				
personas con todo tipo de capacidades para nuestro				
disfrute. En los últimos 12 meses, tuve un problema para obtener el				
cuidado médico que necesitaba para mí o para un familiar				
por parte de cualquier tipo de proveedor de cuidado de la				
salud, dentista, farmacia u otro centro sanitario.				
No sé dónde obtener servicios para mí cuando estoy triste,				
deprimido/a, o necesito hablar con alguien.				
Sé con seguridad que puedo obtener una cita con mi médico				
con cierta rapidez.				
Tengo a mi disposición un lugar para recibir cuidados				
médicos que no sea una sala de emergencias.				
En los últimos 12 meses, me preocupé de si la comida se				
agotaría antes de obtener dinero para comprar más				
alimentos.				
En los últimos 12 meses, los alimentos que compré				
simplemente no duraron lo suficiente y no tuve dinero para				
comprar más.				
En mi comunidad hay muchas opciones para comprar				
alimentos saludables y asequibles.				
Ahara la haramas alarmas musarmas mara madama		.:	- distints	
Ahora le haremos algunas preguntas para poder v personas acerca de las pregunta			•	upos de
personas acerca de las preguna	as que le li	emos neem	<u> </u>	
7. Código postal de su casa:				
				
8. ¿Cuántos años tiene?				
9. ¿Cuál es su raza/origen étnico?				
□ Blanco/a	□ Asiátic	o/a o isleño	o/a del Pacífio	co
□ Negro/a o afroamericano/a		na americai		
☐ Hispano/a o latino/a	_		ue):	
- Hispatio, a O latillo, a		, tespecinq	uej	
10. ¿Cuántos años tienen los niños/as que viven en su ca	sa?			
□ 11 y menos	□ Más de	e 18 años		
□ Entre 12 y 18 años	□ Ningun			
- LINUC 12 y 10 anos	u mingun			

11. ¿Qué tipo de seguro médico o cobertura tiene?	
□ Privado	□ Medicare
□ Patrocinado por un empleador	□ Ninguno
□ Medicaid	□ Otro, (especifique):

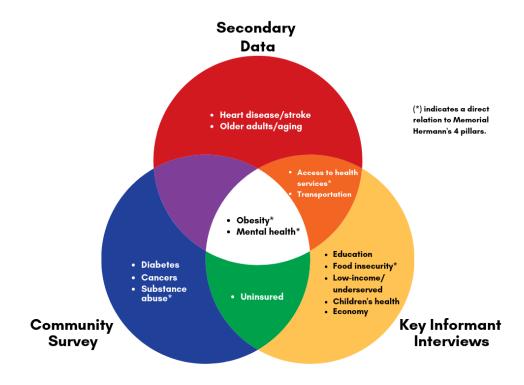

Appendix D. Prioritization Tool

Prioritization Survey

Thank you for your participation in this prioritization process.

The Community Health Needs Assessment (CHNA) process has multiple steps. After thorough research has been completed to identify the significant health needs in the community, these significant health needs must be prioritized for further strategic planning and implementation. Prioritization is the process of determining the most important or urgent health needs to address in communities.

Below is a diagram that shows the methods that were used to identify key issues across Memorial Hermann's service areas. These three methods included: a secondary data review, a community survey and key informant interviews. As you see, some issues revealed themselves across multiple methods. Reviewing this diagram may help you complete this survey.

1. The following health needs are not listed by order of importance. For each health need, click on the arrow on the drop down box and select your agreement with each statement. If you are on a tablet or phone, please scroll all the way to the right for each row.

The issue impacts	This issue	There are not	This issue has

2. Indicate the level of importance that should be given towards each of Memorial Hermann's 4 Pillars. Key definitions are listed below.

	Not	Somewhat	Important	Very	Not Sure
	Important	Important		Important	
Access to care (including					
healthcare access, healthcare					
resource awareness,					
healthcare navigation /					
literacy)					
Food as health (including food					
insecurity, food programs,					
food knowledge)					
Exercise as medicine					
(including obesity, access to					
parks, safe places to exercise)					
Emotional well-being					
(including emotional health,					
mental health, substance					
abuse)					

Key definitions:

Healthcare navigation/literacy: need for education in navigating health systems Food insecurity: lacking reliable access to healthy food options

Food knowledge: one's understanding of healthy foods 3. Who in your community is most affected by poor health outcomes? (Select up to 5) ☐ Lesbian, Gay, Bisexual, Transgender, Queer or Questioning (LGBTQ) ☐ Older Adults ☐ Persons with Disabilities (cognitive, sensory or physical disability) ☐ Racial/Ethnic Minority Populations □ Veterans ☐ Immigrants or other undocumented persons ☐ Persons experiencing homelessness or precariously housed ☐ Other Populations (please specify): ______ 4. Please provide your name: ______ 5. Please provide your email address: ______ 6. Please select the name(s) of the healthcare facility or facilities you represent. You may choose more than one. ☐ Memorial Hermann Katy ☐ Memorial Hermann Memorial City ☐ Memorial Hermann Greater Heights ☐ Memorial Hermann Northeast ☐ Memorial Hermann Southeast ☐ Memorial Hermann Sugar Land ☐ Memorial Hermann Southwest ☐ Memorial Hermann The Woodlands ☐ Katy Rehab ☐ Texas Medical Center ☐ TIRR Memorial Hermann ☐ Memorial Hermann Surgical Hospital Kingwood ☐ Memorial Hermann Surgical Hospital First Colony

Food programs: programs, efforts or services designed to address food issues

Thank you for your input and participation in the Community Health Needs Assessment process.

□ Memorial Hermann First Colony Hospital (ER)
 □ Memorial Hermann Tomball Hospital (ER)
 □ Other (please specify):
